Improving Domestic Resource Mobilization Through Financial Development Nepal:

Improving Domestic Resource Mobilization Through Financial Development William James, Muhammad Ghulam Quibria, 1988 *ERD Working Paper Series*, 2002 *How Can Cambodia, Lao PDR, Myanmar, and Viet Nam Cope with Revenue Lost Due to AFTA Tariff Reductions?* Kanokpan Lao-Araya, 2008-12 In joining the Assoc of Southeast Asian Nations ASEAN and ASEAN Free Trade Area Cambodia Lao PDR Myanmar and Viet Nam have agreed to comply with the Common Effective Preferential Tariff CEPT Scheme which reduces intra ASEAN tariff rates on certain imports and may reduce gov t revenue This study proposes tax structure and tax admin reforms and other policies that can be introduced to enhance revenue collection They can Strategically allocate goods among the four CEPT scheme lists Improve their tax systems by replacing traditional general sales taxes with Value Added Tax Reduce inefficiencies that impede tax collection and Discourage tax avoidance and evasion and reduce corruption among tax officials **Framework for Establishing**

Priorities in a Country Poverty Reduction Strategy Ron Duncan, 2008-05 This paper reviews the history progress of understanding development theory over the past 50 years Development thinking has evolved from an early paradigm that focused on savings capital investment to subsequent arguments favoring the inclusion of human capital policy technical change finally to the inclusion of the role of institutions good governance Secure property rights in the broadest sense which are applicable to all resources not just land are particularly important to realize investment yield This evolution of development thought describes a conceptual framework that can guide development practitioners in prioritizing sequencing characterizing all interventions aimed at reducing poverty *Practices of Poverty Measurement and Poverty Profile of Nepal* Devendra Chhetry, 2009-03 Reviews the poverty measuring practices available measures of poverty and economic growth figures of Nepal The poverty rates for FY 1976 77 1984 85 and 1995 96 are found to be not comparable due to change in methodology over time The three poverty rates average 40% Nepal has experienced high economic growth during the 7th 1985 86 to 1989 90 and 8th 1992 93 to 1996 97 Plan periods with no strong evidences of poverty reduction This incompatible result is partially explained by comparing growth of the agricultural sector with the role of the sector in providing employment and income generation at the household level and by comparing social indicators particularly literacy rate with the growth of the nonagricultural sector Tables *Measuring Willingness to Pay for Electricity* Peter Choynowski, 2008-05 The measurement of willingness to pay for electricity relies critically on a reliable estimate of the demand for electricity function Empirical work tends to assume that the demand for electricity has no satiation point Many electricity demand models assume a constant price elasticity which implies infinite demand at low prices This report proposes a plausible functional form for the demand of electricity The proposed functional form is consistent with two properties of electricity demand functions for households firms namely the negative relationships between price quantity the finiteness of demand at zero price The report also demonstrates that this functional form of the demand function leads to

easily estimable economic benefits of electricity

Role of Infrastructure in Land-Use Dynamics and Rice Production in Viet Nam's Mekong River Delta Christopher Edmonds, 2008-06 Examines the role of infrastructure development and technical change in explaining increases in agricultural production and changes in land use in the Mekong Delta Region of Viet Nam during the mid 1990s The transportation costs involved in moving agricultural input and output between farms and markets significantly effect farm land use and production decisions Greater transport costs reduce the likelihood that farms adopt intensive cropping patterns or cultivate non rice crops Results suggest that the quality of local water management infrastructure is much more important than transport costs in explaining the increased intensity of land use and level of production observed in the Mekong Delta during the 1990s Illustrations

Labor Market Distortions, Rural-Urban Inequality, and the Opening of the People's Republic of China Economy Thomas Hertel, 2008-05 Evaluates the impact of some key factor market reforms on rural urban inequality income distribution using a household disaggregated recursive dynamic computable general equilibrium model of the People s Republic of China It also explores how these factor market reforms interact with product market reforms currently under way as part of the country s World Trade Org WTO accession process The simulation results show that reforms in the rural land rental market hukou system as well as increasing off farm labor mobility would reduce the urban rural income ratio dramatically Furthermore the combination of WTO accession factor market reforms improves both efficiency equality significantly Charts tables graphs

Economic Growth and Poverty Reduction in Viet Nam Arsenio M. Balisacan, 2011-04 Viet Nam s dramatic transition and growth in the 1990s have been attributed to a series of reforms known as doi moi which began in the late 1980s Economic growth of nearly 8% yearly benefited the poor and reduced poverty from 61% in 1993 to 37% in 1998 The proportionate increases in the incomes of the poorest quintile were appreciably larger than those of the top 20 or 40% of the population This result is at variance with typical findings for other countries which indicate that welfare gains from growth are smallest for the lowest quintile and rise with income group The results for Viet Nam suggest that the faster the growth rate the lesser becomes the role of distributive factors that directly influence the poor s well being A print on demand report

Measuring Competitiveness in the World's Smallest Economies Ganeshan Wignaraja, 2008-05 Attempts to measure competitiveness CP across countries have typically neglected the world s smallest economies Hence a simple composite index the Small State Manufactured Export CP Index or SSMECI was developed to benchmark industrial CP The SSMECI represents the first attempt to provide a comprehensive picture of the CP performance of small states The performance of small states varies across geographical regions income groups country size classes High performing small states had better macroeconomic conditions higher levels of foreign invest more trade openness better levels of educ modern infrastructure A coherent market oriented CP strategy in small states is vital to success on international markets Tables

Strengthening the Economic Analysis of Natural Resource Management Projects Keith Ward, 2003 A review of a range of natural resources projects

prepared during the 1990s by the Asian Development Bank ADB suggests that existing practices of economic analysis tend to capture only some of the impacts that such projects typically have Historically project analysis at ADB and elsewhere has tended to concentrate on identifying a monetized benefit in excess of 12 percent economic internal rate of return EIRR from direct resource use impacts and simply identifying and describing nonquantifiable impacts With the adoption of the ADB Environment Policy and the growing recognition that it is very often the poorest who suffer most from natural resource depletion and degradation a case is made that more analytic rigor in capturing as many as possible of the resource impacts of such projects is desirable This report therefore suggests some specific techniques to strengthen the economic analysis of natural resources projects including improving the application of the benefits transfer method defining the spatial boundaries of project economic analysis establishing an appropriate accounting stance for the project establishing the project s counterfactual i e without project situation and including the health impacts of such projects The use of appropriate discount rates for sensitivity analysis and for investment decision making are discussed and guidance is given on presenting the results of a project analysis and summarizing the poverty reduction impact of natural resource management projects

European Social Model Assar Lindbeck, 2008-06 Developing countries esp the least developed ones have more to learn from social policies in Europe during the early 20th cent than from the elaborate welfare state arrangements after WW2 In addition to macro economic growth and stability the main ambitions must be to fight human deprivation incl illiteracy malnutrition and poor access to water and sanitation in some cases also weak incompetent and or corrupt governments Informal systems in the fields of transfers and social services must not be destroyed when developing countries embark on more formal systems The European experience also warns against the creation of social systems that are so generous that disincentives and receding social norms distort the nat economy *Monetary Poverty Estimates in Sri Lanka* Neranjana Gunetilleke, 2008-05 Provides an introduction to poverty related data available in Sri Lanka monetary measurements of poverty carried out using this data The lack of an official poverty line in Sri Lanka until June 2004 has over time generated a number of poverty lines corresponding poverty measures While these poverty measures have provided a good base for poverty analysis this paper also touches on the problems generated by the use of multiple methods The release of the official poverty line by the Dept of Census Statistics can be seen as a major step forward in the debate on poverty measurement in Sri Lanka Charts tables Monetary Policy, Capital Flows and Exchange Rates William Allen, David Dickinson, 2002-02-21 Maxwell Fry was known internationally for his research into international and domestic financial issues This book constitutes a tribute to his pioneering work in so many areas and draws together contributions from a range of academic and policy making colleagues who were fortunate enough to experience the depth of knowledge and insights which Max **Revisiting Growth and Poverty Reduction in Indonesia** A. M. Balisacan, Ernesto M. Pernia, Abuzar Asra, 2002 Indonesia has an impressive record of economic growth and poverty reduction over the past 2 decades The growth poverty nexus appears

strong at the aggregate level Newly constructed panel data on the country's 285 districts however reveal huge differences in poverty changes subnational economic growth and local attributes Results of econometric analysis show that besides growth other factors directly influence the welfare of the poor apart from their impact on growth itself Among the critical ones are infrastructure human capital and price incentives and access to technology Thus while fostering economic growth is evidently crucial a more complete poverty reduction strategy should take into account these relevant factors Asian Regionalism

and Its Effects on Trade in the 1980s and 1990s Ramon L. Clarete, Christopher Edmonds, Jessica Seddon Wallack, 2002

Outlines the major preferential trade agreements PTAs in Asia and other regions and reviews trends in trade flows Uses a model to estimate the effect of various PTAs on trade flows within and across membership groupings as well as the effect of PTAs on members' trade with Asian countries On the basis of these estimates the report is able to categorize 11 major PTAs into those that increase intrabloc trade at the expense of their respective imports from the rest of the world those that expand their respective trade among their members without reducing their trade with nonmembers and those that reduce trade with nonmembers without significant changes in intrabloc trade Also shows that PTAs have augmented trade in Asia

Why Are Some Countries Richer Than Others? Jesus Felipe, 2008-10 Provides evidence of a problem with the influential testing and assessment of Solow's 1956 growth model proposed by Mankiw et al 1992 and a series of papers evaluating the latter First the assumption of a common rate of technical progress maintained by Mankiw et al 1992 is relaxed Solow's model is extended to include the different levels and rates of technical progress of each country This increases the explanatory power of the cross country variation in income capital of the OECD countries to over 80% The estimates of the parameters are statistically significant and take the expected values and signs Second the estimates merely reflect a statistical artifact This has serious implications for the possibility of actually testing Solow's growth model Illus **Poverty**
