Blood, Faith and Iron: A dynasty of Catholic industrialists in sixteenth- and seventeenth-century England Paul Belford, 2018-11-13 The Ironbridge Gorge is presented as the birthplace of the Industrial Revolution and so part of a national narrative of heroic Protestant individualism. However, this is not the full story. This book asserts that this industrial landscape was in fact created by an entrepreneurial Catholic dynasty over 200 years before the Iron Bridge was built.

Controlling Cyberspace Carol M. Glen, 2017-12-07 Informed by theories of international relations, this book assesses global political conflicts over cyberspace. It also analyzes the unique governance challenges that the Internet presents both in terms of technical problems and control over content. The Internet is a resource of unparalleled importance to all countries and societies, but the current decentralized system of Internet governance is being challenged by governments that seek to assert sovereign control over the technology. The political battles over governing the Internet ones that are coming and conflicts that have already started have far-reaching implications. This book analyzes the shifting nature of Internet governance as it affects timely and significant issues including Internet freedom, privacy and security as well as individual and corporate rights. *Controlling Cyberspace* covers a broad range of issues related to Internet governance, presenting a technical description of how the Internet works, an overview of the Internet governance ecosystem from its earliest days to the present, an examination of the roles of the United Nations and other international and regional organizations in Internet governance, and a discussion of Internet governance in relation to specific national and international policies and debates. Readers will consider if Internet access is a human right and if the right to freedom of expression applies equally to the exchange of information online. The book also addresses how the digital divide between those in developed countries and the approximately 5 billion people who do not have access to the Internet affects the issue of Internet governance and it identifies the challenges involved in protecting online privacy in light of government and corporate control of information.
