Green Machine Learning Protocols for Future Communication Networks Saim Ghafoor,Mubashir Husain Rehmani,2023-10-25 Machine learning has shown tremendous benefits in solving complex network problems and providing situation and parameter prediction However heavy resources are required to process and analyze the data which can be done either offline or using edge computing but also requires heavy transmission resources to provide a timely response The need here is to provide lightweight machine learning protocols that can process and analyze the data at run time and provide a timely and efficient response These algorithms have grown in terms of computation and memory requirements due to the availability of large data sets These models algorithms also require high levels of resources such as computing memory communication and storage The focus so far was on producing highly accurate models for these communication networks without considering the energy consumption of these machine learning algorithms For future scalable and sustainable network applications efforts are required toward designing new machine learning protocols and modifying the existing ones which consume less energy i e green machine learning protocols In other words novel and lightweight green machine learning algorithms protocols are required to reduce energy consumption which can also reduce the carbon footprint To realize the green machine learning protocols this book presents different aspects of green machine learning for future communication networks This book highlights mainly the green machine learning protocols for cellular communication federated learning based models and protocols for Beyond Fifth Generation networks approaches for cloud based communications and Internet of Things This book also highlights the design considerations and

challenges for green machine learning protocols for different future applications *Future Communication Technology and Engineering* Kennis Chan, 2015-04-06 This volume contains the papers presented at the 2014 International Conference on Future Communication Technology and Engineering FCTE2014 taking place in Shenzhen China from 16-17 November 2014. Communication technologies are developing quickly and there are more possibilities for future communication technologies provided by the achievements made rather than limitations. At the convention innovative and inspiring ideas were presented. Certain controversial topics were discussed e.g. what are the most efficient convenient methods for information communication and what is the most probable prospect for future communication technology. It is difficult to make any definite conclusions from these presentations and discussions but the desire and drive for improvement and development shown by the participants/authors are surely remarkable and respectable. In this book 70 papers are included chosen from hundreds of submissions contributed by scientists from various countries and regions after careful reading and discussing by a team of reviewers. These papers cover almost every possible aspect of communication technology including communication systems, automation and control engineering, electrical engineering, AI algorithms, signal processing, data mining and knowledge based systems. **Future Communication, Information and Computer Science** Dawei Zheng, 2015-02-05 The 2014 International Conference on Future Communication Information and Computer Science FCICS 2014 was held May 22-23 2014 in Beijing China. The objective of FCICS 2014 was to provide a platform for researchers, engineers and academics as well as industrial professionals from all over the world to present their research results and development activities in Computer Network and Information Technology and Communication Engineering. *The STREAM TONE: The Future of Personal Computing?* T. Gilling, 2015-01-28 Have you ever looked at your latest personal computing device and wondered what comes next? Imagine a world where your next personal computing device is the last one that you would ever need to buy. Where you would never need to worry about operating systems, software patches or viruses. Where you always had enough processing power, memory storage and top of the line graphics. Where you could access all of the very best software applications regardless of their platform. Where you had a constant connection to all your favourite digital services and your battery lasted for days, perhaps even weeks of full on use. Sounds good, doesn't it? Well, this is the world of the Stream Tone. A world that does not exist in some far off future, this could be figuratively speaking, our world a mere five minutes from now. All that is needed to make it a reality is the creative convergence of certain technologies that are already available and in use today. Personal computing is changing from an old world of local services provided by local devices to a new world of remote Web based services provided by cloud computing based data centres. The STREAM TONE: The Future of Personal Computing explores in some detail what might be required to make a comprehensive move to this exciting new world and the many benefits that move could bring. This book not only attempts to make a thorough evaluation of the technology ecosystem that will be required to realise this future but also considers many of the implications of such a move. Along the way it also

discusses hundreds of currently available technologies and how they could be used to help build this future This book has an easy going style that does not assume that the reader is some sort of egg head or rocket scientist It should therefore be suitable for almost anyone that has an interest in what might come next in the world of personal computing Most of the subject matter is explained in enough detail that even a technical novice should be able to understand what is being discussed Website www.TheStreamTone.com **FCC Record** United States.
