Kacprzyk,H. Nurmi,Mario Fedrizzi,2012-12-06 We live unfortunately in

turbulent and difficult times plagued by various political economic and social problems as well as by natural disasters worldwide Systems become more and more complicated and this concerns all levels exemplified first by global political alliances groups of countries regions etc and secondly by multinational global corporations and companies of all sizes These same concerns affect all social groups This all makes decision processes very complicated In virtually all decision processes in these complicated systems there are various actors decision makers who represent individual subjects persons countries companies etc and their respective interest groups To reach a meaningful good decision opinions of all such actors must be taken into account or a given decision may be rejected and not implemented Ideally a decision would be made after a consensus between the parties involved had been attained So consensus is a very desirable situation In most real world cases there is considerable uncertainty concerning all aspects of the decision making process Moreover opinions goals constraints etc are usually imprecisely known This makes the decision making process difficult as one cannot employ conventional hard tools **Soft Computing in Human-Related Sciences** Horia-Nicolai L Teodorescu,Abraham Kandel,Lakhmi C. Jain,1999-04-29 Hard boundaries have traditionally existed between such fields as fuzzy systems neural networks genetic algorithms chaotic systems and expert systems Gradually those boundaries are tending to vanish and soft computing based systems that mix these different approaches have begun to emerge Soft Computing Techniques in Human Related Sciences focuses on the use of novel techniques such as artificial neural networks fuzzy logic and genetic algorithms to solve practical problems related to humans their activities health and social needs This volume illustrates and presents in an organized manner some of the recent progress in the applications of soft computing to fields related to social science medical science psychology psychiatry management of health and community services and humanoid robots Soft Computing Techniques in Human Related Sciences begins with an introductory chapter to aid newcomers with the basic concepts and progresses to the methodology of the use of soft computing in robotics prosthetics medicine psycchology and man machine interaction **Learning Classifier Systems** Pier L. Lanzi,Wolfgang Stolzmann,Stewart W. Wilson,2003-06-26 Learning Classifier Systems LCS are a machine learning paradigm introduced by John Holland in 1976 They are rule based systems in which learning is viewed as a process of ongoing adaptation to a partially unknown environment through genetic algorithms and temporal difference learning This book provides a unique survey of the current state of the art of LCS and highlights some of the most promising research directions The first part presents various views of leading people on what learning classifier systems are The second part is devoted to advanced topics of current interest including alternative representations methods for evaluating rule utility and extensions to existing classifier system models The final part is dedicated to promising applications in areas like data mining medical data analysis economic trading agents aircraft maneuvering and autonomous robotics An appendix comprising 467 entries provides a comprehensive LCS bibliography *Image Analysis and Recognition* Mohamed Kamel,Aurelio Campilho,2009-07-07 This book constitutes the refereed proceedings of the 6th

Ramírez,Witold Pedrycz,2007-09-20 This book comprises a selection of papers on new methods for analysis and design of hybrid intelligent systems using soft computing techniques from the IFSA 2007 World Congress held in Cancun Mexico June 2007   Soft Methods in Probability, Statistics and Data Analysis Przemyslaw Grzegorzewski,Olgierd Hryniewicz,Maria A. Gil,2013-12-11 Classical probability theory and mathematical statistics appear sometimes too rigid for real life problems especially while dealing with vague data or imprecise requirements These problems have motivated many researchers to soften the classical theory Some softening approaches utilize concepts and techniques developed in theories such as fuzzy sets theory rough sets possibility theory theory of belief functions and imprecise probabilities etc Since interesting mathematical models and methods have been proposed in the frameworks of various theories this text brings together experts representing different approaches used in soft probability statistics and data analysis   *Artificial Neural Nets. Problem Solving Methods* José Mira,2003-05-22 The two volume set LNCS 2686 and LNCS 2687 constitute the refereed proceedings of the 7th International Work Conference on Artificial and Natural Neural Networks IWANN 2003 held in Ma Menorca Spain in June 2003 The 197 revised papers presented were carefully reviewed and selected for inclusion in the book and address the following topics mathematical and computational methods in neural modelling neurophysiological data analysis and modelling structural and functional models of neurons learning and other plasticity phenomena complex systems dynamics cognitive processes and artificial intelligence methodologies for net design bio inspired systems and engineering and applications in a broad variety of fields   *Third Congress on Intelligent Systems* Sandeep Kumar,Harish Sharma,K.
