Analysis and Modeling of GaAs MESFET's for Linear Integrated Circuit Design Mankoo Lee, 1990 A complete Gallium Arsenide Metal Semiconductor Field Effect Transistor GaAs MESFET model including deep level trap effects has been developed which is far more accurate than previous equivalent circuit models for high speed applications in linear integrated circuit design A new self backgating GaAs MESFET model which can simulate low frequency anomalies is presented by including deep level trap effects which cause transconductance reduction and the output conductance and the saturation drain current to increase with the applied signal frequency This model has been incorporated into PSPICE and includes a time dependent I V curve model a capacitance model a subthreshold current model an RC network describing the effective substrate induced capacitance and resistance and a switching resistance providing device symmetry An analytical approach is used to derive capacitances which depend on V_{gs} and V_{ds} and is one which also includes the channel substrate junction modulation by the self backgating effect A subthreshold current model is analytically derived by the mobile charge density from the parabolic potential distribution in the cut off region S-parameter errors between previous models and measured data in conventional GaAs MESFET's have been reduced by including a transit time delay in the transconductances g_m and g_{ds} by the second order Bessel polynomial approximation As a convenient extraction method a new circuit configuration is also proposed for extracting simulated S-parameters which accurately predict measured data Also a large signal GaAs MESFET model for performing nonlinear microwave circuit simulations is described As a linear IC design vehicle for demonstrating the utility of the model a 3 stage

GaAs operational amplifier has been designed and also has been fabricated with results of a 35 dB open loop gain at high frequencies and a 4 GHz gain bandwidth product by a conventional half micron MESFET technology Using this new model the low frequency anomalies of the GaAs amplifier such as a gain roll off a phase notch and an output current lag are more accurately predicted than with any other previous model This new self backgating GaAs MESFET model which provides accurate voltage dependent capacitances frequency dependent output conductance and transit time delay dependent transconductances can be used to simulate low frequency effects in GaAs linear integrated circuit design

Characterization, Modeling and Circuit Design of GaAs Mesfet's Kang Woo Lee, 1984 *FET Modeling for Circuit Simulation* Dileep A. Divekar, 2012-12-06 Circuit simulation is widely used for the design of circuits both discrete and integrated Device modeling is an important aspect of circuit simulation since it is the link between the physical device and the simulated device Currently available circuit simulation programs provide a variety of built in models Many circuit designers use these built in models whereas some incorporate new models in the circuit simulation programs

Understanding device modeling with particular emphasis on circuit simulation will be helpful in utilizing the built in models more efficiently as well as in implementing new models SPICE is used as a vehicle since it is the most widely used circuit simulation program However some issues are addressed which are not directly applicable to SPICE but are applicable to circuit simulation in general These discussions are useful for modifying SPICE and for understanding other simulation programs The generic version 2G 6 is used as a reference for SPICE although numerous different versions exist with different modifications This book describes field effect transistor models commonly used in a variety of circuit simulation programs Understanding of the basic device physics and some familiarity with device modeling is assumed Derivation of the model equations is not included SPICE is a circuit simulation program available from EECS Industrial Support Office 461 Cory Hall University of California Berkeley CA 94720 Acknowledgements I wish to express my gratitude to Valid Logic Systems Inc
