

# Angular correlation

- If nuclear spins can be aligned in one direction, angular distribution of emitted  $\gamma$ -ray intensity would depend on initial nuclear spin and multipole character of radiation
  - Align nuclei in magnetic or electric field at near 0 K
  - observe a  $\gamma$  ray in coincidence with a preceding radiation
    - Alpha, beta, or gamma
- coincidence experiment
  - angle  $\theta$  between two sample-detector axes is varied, coincidence rate will vary as a function of  $\theta$

Correlation function:  $W(\theta) = 1 + a_2 \cos^2 \theta + a_4 \cos^4 \theta$

$$A = \frac{W(180^\circ) - W(90^\circ)}{W(90^\circ)} \quad \text{where } A = a_2 + a_4 \text{ (fits)}$$

Tables of Coefficients for the Analysis of Triple Angular Correlations of Gamma Rays from Aligned Nuclei presents illustrations and discussions of such tables The book discusses direction direction triple correlation measurements as well as polarization direction correlation measurements The text also covers integral and half integral tables Lecturers and students of physics will find the book invaluable      *Spectroscopy*, 1976-09-17 This volume attempts to cover the entire subject of spectroscopy from pair production in the gamma ray region to dielectric loss in the low radio frequency region Defining spectroscopy as the study of the emission and absorption of electromagnetic radiation by matter this book presents a general theory that is applicable throughout the entire range of the electromagnetic spectrum and show how the theory can be applied in gaining knowledge of the structure of matter from experimental measurements in all spectral regions The book is intended for graduate students interested in acquiring a general knowledge of spectroscopy for spectroscopists interested in acquiring knowledge of spectroscopy outside the range of their own specialties and for other physicists and chemists who may be curious as to what those spectroscopists have been up to and as to what spectroscopists find so interesting about their own work      **Gamma-Ray Angular Correlations From Aligned Nuclei Produced by Nuclear Reactions** Atomic Energy of Canada Limited, Alexander John Ferguson, Albert Edward Litherland, 1960      *Angular Correlations in Nuclear Disintegration* Hans van Krugten, Bob van Nooijen, 2012-12-06

In 1969 we felt that the subject of angular correlations in nuclear disintegration had received little special attention at international conferences It is true that perturbed angular correlations had been discussed at a small highly specialised meeting at Uppsala in 1963 and that in 1967 certain aspects of perturbed angular correlations had been considered at a conference on hyperfine structure at Asilomar However both conferences were very limited in scope from the point of view of a low energy nuclear physicist Besides since these conferences were being held the field of perturbed angular correlations had received new impetus from the still expanding application of the implantation of radioactive isotopes in suitable environments from the construction of large superconductive magnets etc Meanwhile the technique of measuring correlations between beta particles and circularly polarized gamma rays had been developed to such a degree that they lent themselves to the investigation of beta decay nuclear structure and charge dependence of nuclear forces The systematic study of heavy elements had increased the importance of alpha gamma angular correlations which present their own specific problems Theoretical internal conversion data had become available to such an extent that electron gamma directional correlations became an important tool in the investigation of nuclear structure in a large number of cases it is more advantageous to

study electron gamma correlations instead of the commonly measured gamma gamma directional correlations
