Gamma-ray Line Astrophysics:

Gamma-Ray Line Astrophysics Philippe Durouchoux, Nikos Prantzos, 1991 **Galactic Astrophysics and Gamma-Ray Astronomy** G.E. Morfill, R. Buccheri, 2012-12-06 This book contains the invited and contributed lectures presented at a meeting organised in the context of the XVIII general assembly of the IAU held in Patras August 19 1982. Roughly one hundred scientists attended this meeting the discussions were lively sometimes heated and the original time span allocated to the meeting was as a result comfortably exceeded by about 50 %. The aim of this meeting was to determine the role of galactic gamma ray astronomy within the general concept of galactic astrophysics. The timing at the end of the COS B mission was regarded as opportune because it gives interested astrophysicists the possibility for interdisciplinary studies using the existing gamma ray data base e.g. comparison with infrared radio X ray etc. astronomies as well as for theoretical studies. The next generation of gamma ray detectors will probably not be in operation for another 5 to 10 years and therefore it is hoped that the proceedings of this meeting can be used in the intermediate time as a basis for further studies as a stimulation for more theoretical work and as an important contribution for defining the aims and operation of future gamma ray missions. The interrelationship with other branches of astronomy the astrophysical implications and the study of relevant physical processes using available measurements in the near Earth environment were important results of the meeting. Many persons contributed to the success of the meeting in particular all those who either presented a contribution and or took part in the discussions. **Gamma-ray Astrophysics** Carl E. Fichtel, 1997 Handbook of X-ray and Gamma-ray Astrophysics Cosimo Bambi, Andrea Santangelo, 2024-02-29 This book highlights a comprehensive coverage of X ray and Gamma ray astrophysics. The first and the second parts discuss respectively X ray and Gamma ray experimental techniques and observatories. The third part is devoted to science including galactic and extragalactic sources. The fourth and last parts are dedicated to analysis techniques in X ray and Gamma ray astronomy spectral analysis imaging analysis timing analysis and polarimetric analysis. Presenting the state of the art in X ray and gamma ray astronomy this is both a valuable book for students and an important reference resource for researchers in the field. *TeV Gamma-Ray Astrophysics* Heinrich J. Völk, Felix A. Aharonian, 2012-12-06 The International Heidelberg Workshop on TeV Gamma Ray Astrophysics brought together astrophysicists from the various fields which play a role in the formation of high energy gamma ray emission. In particular theoretical and observational aspects of the physics and astrophysics of pulsars and quasars the acceleration of particles at Supernova Remnants and other strong astrophysical shock fronts and cascade processes in universal background photon fields were comprehensively discussed in more than thirty reviews by leading experts. In their entirety these reviews describe the birth of a new field of astronomy. This field concerns cosmic gamma rays of very high energy which are observed with ground based optical telescopes due to the Cherenkov emission of the secondary particles created by the interaction of these gamma rays with atoms in the Earth's atmosphere. Beyond that the workshop encompassed the latest developments.

and trends in theory and observation of cosmic gamma ray sources of all energies from nuclear gamma ray lines in the MeV region through the Bremsstrahlung Inverse Compton and pion decay continuum emission to gamma rays due the decay of exotic relics from the early Universe Audience Specialists as well as students in physics and astrophysics and young research workers

Gamma-ray Astrophysics Floyd William Stecker, Jacob I. Trombka, 1973 Conference papers on gamma ray astrophysics are summarized Data cover the energy region from about 0.3 MeV to a few hundred GeV and theoretical models of production mechanisms that give rise to both galactic and extragalactic gamma rays

High Energy Astrophysics James Matthews, 1994 This book is a collection of comprehensive reviews on astrophysics at the highest energies It puts together for the first time discussions of astrophysics from MeV to EeV energies and beyond Observations at these energies reveal nuclear and particle physics throughout our galaxy as well as in the most extreme environments in the entire cosmos These reports range from the recent spectacular results from the Compton Gamma Ray Observatory including the latest information on enigmatic gamma ray bursts to cosmic rays at the highest energies ever observed by man

Gamma-ray Astronomy P. V. Ramana Murthy, A. W. Wolfendale, 1993-04 The recent launch of NASA's Gamma Ray Observatory will increase interest in gamma ray astronomy This is a fully up dated new edition of the authors earlier volume published in 1986 and covers both the background science and the current state of the art in this field The emphasis is on the astronomy and astrophysics of known sources of cosmic gamma rays outside the solar system The authors discuss the mechanisms for the production and absorption of gamma rays The gamma ray line astronomy of the interstellar medium galactic centre and various discrete sources is then considered Gamma ray bursts are treated in considerable detail in chapter three and the final two chapters describe medium energy and ultra high energy gamma rays Relevant data from supernova SN1987A is also included in this edition The book includes comprehensive references to the primary literature together with many figures and tables The concentration on phenomenology makes this book a fine introduction to gamma ray astronomy

Focusing Telescopes in Nuclear Astrophysics Peter Ballmoos, 2007-11-25

HESS High Energy Stereoscopic System a ground based Cerenkov array telescopes has been operated since a few years and in 2004 has performed the first Galactic plane scan with a sensitivity of a few percent of the Crab at energies above 100 GeV resulting in the discovery of eight sources most of which without any counterpart at different energies

1. 2. Particular attention was devoted to HESS J1813-178 not identified with any known X gamma ray emitter and hypothesised to be a dark particle accelerator Independently and at the same time INTEGRAL discovered a new soft gamma ray source namely IGR J18135-1751 identified as the counterpart of HESS J1813-178 This high energy emitter whose nature was still mysterious at the time of the discovery was then associated with the supernova remnant SNR G12.82+0.02-6.10-18 Even if a chance coincidence cannot be completely ruled out in view of the 2 arcmin INTEGRAL error box and the possible angular extension in the high energy the overall characteristics of this star forming region

7 comprising SNRG 12 82 0 02 are consistent with supernova plerion origin. More recently the MAGIC Major Atmospheric Gamma Imaging Cerenkov telescope collaboration has reported a positive observation of HESS J1813-178 resulting in a gamma ray flux consistent with the previous HESS detection and showing a hard power law with $\Gamma = 2.1$ in the range from 0.4 to 10 TeV. High Energy Astrophysics: Models And Observations From MeV To TeV Peter L Biermann, David Fegan, Fuxi Gan, Dieter H Hartmann, Richard E Lingenfelter, Pierre Sokolsky, Todor S Stanev, 1994-06-21 This book is a collection of comprehensive reviews on astrophysics at the highest energies. It puts together for the first time discussions of astrophysics from MeV to EeV energies and beyond. Observations at these energies reveal nuclear and particle physics throughout our galaxy as well as in the most extreme environments in the entire cosmos. These reports range from the recent spectacular results from the Compton Gamma Ray Observatory including the latest information on enigmatic gamma ray bursts to cosmic rays at the highest energies ever observed by man.

Astrophysics İbrahim Küçük, 2012-03-30 This book provides readers with a clear progress to theoretical and observational astrophysics. It is not surprising that astrophysics is continually growing because very sophisticated telescopes are being developed and they bring the universe closer and make it accessible. Astrophysics Book presents a unique opportunity for readers to demonstrate processes that do occur in Nature. The unique feature of this book is to cover different aspects in astrophysics covering the topics Astronomy Theoretical Astrophysics Observational Astrophysics Cosmology The Solar System Stars Planets Galaxies Observation Spectroscopy Dark Matter Neutron Stars High Energy Astrophysics. The Gamma Ray Sky with Compton GRO and SIGMA M. Signore, P. Salati, G. Vedrenne, 2012-12-06 This volume consists of invited lectures and seminars presented at the NATO Advanced Study Institute The Gamma Ray Sky with COMPTON GRO and SIGMA which was held at the Centre de Physique Theorique of Les Houches France in January-February 1994. The school has been planned by a Scientific Organizing Committee. It was organized with the aim of providing students and young researchers with an up to date account of the high energy phenomena in the vicinity of compact objects and the diffuse gamma ray backgrounds after the early results from the gamma ray telescope SIGMA and the four instruments onboard COMPTON GRO Gamma Ray Observatory BATSE Burst and Transient Source Experiment COMPTEL Compton Telescope EGRET Energetic Gamma Ray Experiment Telescope and OSSE Oriented Scintillation Spectrometer Experiment. It was attended by more than sixty researchers from many countries. The lectures and seminars represent a complete coverage of our present knowledge and understanding of Gamma ray backgrounds Gamma ray Bursts Active Galactic Nuclei Galactic Compact Objects Gamma ray Spectroscopy Instrumentation and observation techniques etc. Most of these lectures are reproduced in this volume. Unfortunately a few lecturers have chosen not to submit their manuscript. Interim Report of the Astronomy Spacelab Payloads Study: High energy astrophysics Astronomy Spacelab Payloads Project, 1975
