Manfred Taferner, Ernst Bonek, 2013-06-29 We dedicate this book to students of computer science who want to understand why the radio channel is at the heart of mobile communications be it data or voice and to students of communications engineering looking for an introduction to the structure of the Internet protocols and their application to mobile radio We also welcome the practicing engineer working for mobile network operators and infrastructure suppliers and the application programmer looking for the underlying reasons for the problems they encounter in their daily work Given that convergence of the information technology and communications worlds has been talked about for almost 20 years there is still surprisingly little knowledge among specialists of each others fields Data communications over radio notably Internet access however requires full understanding of both fields Internet protocols have been designed for fixed networks There bit errors are so rare that interrupted transmission almost inevitably means congestion In contrast the radio channel constitutes a bottleneck for mobile data communications in that it introduces bit errors even at modest data rates This book is based on the doctoral thesis of one of us M Taferner **Payment Technologies for E-Commerce** Weidong Kou, 2013-03-14
