Instructions for Using the *PMF* CD-ROM Software

The *PMF* CD-ROM contains three applications: the *PMF Tutor*, the *PMF Problem-Solver*, and the *PMF Excel Spreadsheet Templates*. These solutions are designed to run on any computer running Windows 98, ME, NT 4.0, 2000, or XP and Microsoft Excel version 97, 2000, or XP or higher. Be sure to visit the book's Web site at <http://www.aue.com/giftman> to see if any updates have been made to this software since the book was published.

For your convenience, chapter and section references are shown on the screen for each associated computation in the *Problem-Solver* and the *Tutor*. As noted in the text preface as well as in Chapter 1, applicability of the software throughout the text and the study guide is keyed to related text discussions, end-of-chapter problems, and end-of-chapter and end-of-part cases by icons for all of the computational routines. Thus you can integrate the procedures on the disk with the corresponding text discussions.

What Is the *PMF Tutor*?

The *PMF Tutor* is an Excel workbook containing a collection of managerial finance problem types with the problems varied by random-number generation. Its purpose is to give you an essentially unlimited number of problems to work through so that you can practice until you are satisfied that you understand a concept. In using the *Tutor*, the following sequence should produce the best results:

1. **Work the problem first yourself.** It is tempting to save time by letting the computer solve the problem for you and then studying the computer's answer. You won't learn much that way. Even if you make mistakes when you try the problem on your own, you will learn from those mistakes.

Sensing in Hydrology and Water Management Gert A. Schultz, Edwin T. Engman, 2012-12-06 The authors of this book have been approached by consulting engineers You know about remote sensing and thus you can obtain hydrological information where no data exist even without ground measurements so that I can design the required capacity of a drinking water supply reservoir in a developing country On the other hand the authors have been told Remote sensing is not of much use since it is still impossible to estimate ground water resources or surface water flows from remote sensing data The major aim of this book is to correct such unjustified illusions as well as exaggerated criticism by providing the reader with sound information on the potential and the limitations of remote sensing in the field of hydrology and water management The book is meant to be a reference and text it is not a collection of papers from some meeting The book is intended to provide methods to help the readers solve their own problems in hydrology and water management Therefore scientific issues are presented only as far as they are necessary for the application of remote sensing The reader will see that in some fields e g evapotranspiration soil moisture hydrological modeling the scientific development is still on the way while in others operational techniques are already available e g snow melt run off model land use classification and detection of land use changes flood forecasting and control **Commerce Business Daily** ,1998-05 **Project Woksape** Renee A.
