**Interactive TV Technology and Markets** H. O. Srivastava, Hari Om Srivastava, 2002 This book provides professionals with information on technical strategic and creative aspects of developing interactive television ITV systems and shows how to assess the future business potential of ITV It explains technical areas associated with the switch to digital bandwidth and describes design practices such as embedding of extended codes and syntax in programs for content creation The book then explores how ITV programming enhances the value of programs and encourages viewers to order online goods and services and describes the profit potential of ITV Case histories are provided of major players in the industry around the world The author is chief engineer and head of AIR Resources of All India Radio c Book News Inc *Realizing the Information Future* National Research Council, Computer Science and Telecommunications Board, NRENAISSANCE Committee, 1994-02-01 The potential impact of the information superhighway what it will mean to daily work shopping and entertainment is of concern to nearly everyone In the rush to put the world on line special issues have emerged for researchers educators and students and library specialists At the same time the research and education communities have a valuable head start when it comes to understanding computer communications networks particularly Internet With its roots in the research community the Internet computer network now links tens of millions of people and extends well into the commercial world Realizing the

Information Future is written by key players in the development of Internet and other data networks. The volume highlights what we can learn from Internet and how the research education and library communities can take full advantage of the information highway's promised reach through time and space. This book presents a vision for the proposed national information infrastructure NII: an open data network sending information services of all kinds from suppliers of all kinds to customers of all kinds across network providers of all kinds. Realizing the Information Future examines deployment issues for the NII in light of the proposed system architecture with specific discussion of the needs of the research and education communities. What is the role of the institution when everyone is online in their homes and offices? What are the consequences when citizens can easily access legal, medical, educational and government services information from a single system? These and many other important questions are explored. The committee also looks at the development of principles to address the potential for abuse and misuse of the information highway covering equitable and affordable access to the network. Reasonable approaches to controlling the rising tide of electronic information. Rights and responsibilities relating to freedom of expression, intellectual property, individual privacy and data security. Realizing the Information Future includes a wide ranging discussion of costs, pricing and federal funding for network development and a discussion of the federal role in making the best technical choices to ensure that the expected social and economic benefits of the NII are realized. The time for the research and education communities to have their say about the information highway is before the ribbon is cut. Realizing the Information Future provides a timely readable and comprehensive exploration of key issues important to computer scientists and engineers, researchers, librarians and their administrators, educators and individuals interested in the shape of the information network that will soon link us all.

**Competing for the Future** Gary Hamel, C. K. Prahalad, 1996-03-21. New competitive realities have ruptured industry boundaries, overthrown much of standard management practice and rendered conventional models of strategy and growth obsolete. In their stead have come the powerful ideas and methodologies of Gary Hamel and C. K. Prahalad whose much-revered thinking has already engendered a new language of strategy. In this book they develop a coherent model for how today's executives can identify and accomplish no less than heroic goals in tomorrow's marketplace. Their masterful blueprint addresses how executives can ease the tension between competing today and clearing a path toward leadership in the future.

*Communications in EU Law : Antitrust Market Power and Public Interest* Antonio Bavasso, 2003-01-01 Approaching the theme from an antitrust perspective and focusing on telecommunications and television broadcasting this volume examines how traditional European competition law doctrines and principles can be applied to this converging sector The application of antitrust rules to the communications sector is often one of the most controversial areas of law and policy The shift towards a more competition law oriented form of regulation is one of the main principles inspiring the recent reform of European sectorial regulation enshrined in the 2002 Electronic Communication Package The Package was adopted in 2002 and is in the process of being implemented throughout the Union This monograph provides a detailed description of the new regulatory package and highlights the interplay between regulatory provisions and EC competition law It then follows the pattern of a typical antitrust analysis containing

chapters on the definition of relevant market in the sector and various forms of abuses of market power The book also critically examines the Commission's practice and policy in the field of merger control and considers its relationship with wider regulatory policies Finally it analyses the sector from the perspective of the European public interest and the changed nature of communications as a public service

*Relaunching Videotex* H. Bouwman, M. Christoffersen, 2012-12-06 Helena Flam Universitat Konstanz B D R Volker Schneider Max Planck Institute for Social Research Kaln B D R I A traditional sociologist or political scientist may find the choice of videotex as the object of this cross national comparison surprising Indeed contemporary Sociology and Political Science have shied away from the studies of technology Consequently until recently they have not contributed much to the understanding of technological change leaving this field of study to geographers and historians The very best among such studies reveal however that the evolution of technology is a social construction and that the development and deployment of technical systems are intermeshed with social economic and political relations Hughes 1982 These studies show that technologies are often the result of the interaction between a number of social groups and actors e g business the state etc as well as of social struggles revolving around the impact of such collaboration on the third parties Once revealed these complex interdependencies and processes are a compelling justification for the recent focus of sociologists and political scientists on technology and complex technical systems Bijker et al 1987 Burns and Flam 1987 292 365 Mayntz and Hughes 1988 The aim of these as well as the present study is to uncover these webs and processes in order to contribute to the general understanding of technological change from a societal perspective It is also to show that these processes are non deterministic interactive and open ended

*EC Competition and Telecommunications Law* Andreas Bartosch, Jens-Daniel Braun, 2009-01-01 This new volume updates the groundbreaking analysis of its first edition in 2002 when the EC common regulatory framework for electronic communications networks and services had just entered into force So much has changed in the intervening years that that this new edition bears little resemblance to its predecessor with every chapter either extensively altered or entirely new It remains however the most detailed and comprehensive overview available of the application of the EC Treaty's competition rules in the markets for telecommunications and audiovisual media and of the applicable regulatory framework In thirteen chapters each contributed by one or more noted legal authorities in the field the second edition of *EC Competition and Telecommunications Law* covers the full range of EC telecommunications law across all major areas of both institutional and substantive law both on the international and EC levels including the following State aid the merger control regulation justification for sector specific regulation in EC competition law network access authorizations and privileges and mobile telephony Relevant EC media and communications law and relevant aspects of EC competition law are dealt with in detail While some chapters focus on competition law others deal primarily with sector

specific regulation There is practical guidance throughout on procedural matters alongside analysis of the substantive provisions Well known in its first edition this thoroughly revised and updated version continue to be vital reading for practitioners in particular those specializing in European competition law and for company and in house lawyers who are seeking advice on how European law affects their business As a detailed analysis of the basic legislative and regulatory framework of European telecommunications law it will be an invaluable reference work for lawyers judges regulators and policymakers in all the EC Member States as well as for students and teachers of European law
