Improving Measurement of Productivity in Higher Education National Research Council, Division of Behavioral and Social Sciences and Education, Board on Testing and Assessment, Committee on National Statistics, Panel on Measuring Higher Education Productivity: Conceptual Framework and Data Needs, 2013-01-18 Higher education is a linchpin of the American economy and society teaching and research at colleges and universities contribute significantly to the nation's economic activity both directly and through their impact on future growth federal and state governments support teaching and research with billions of taxpayers dollars and individuals communities and the nation gain from the learning and innovation that occur in higher education In the current environment of increasing tuition and shrinking public funds a sense of urgency has emerged to better track the performance of colleges and universities in the hope that their costs can be contained without compromising quality or accessibility Improving Measurement of Productivity in Higher Education presents an analytically well defined concept of productivity in higher education and recommends empirically valid and operationally practical guidelines for measuring it In addition to its obvious policy and research value improved measures of

productivity may generate insights that potentially lead to enhanced departmental institutional or system educational processes Improving Measurement of Productivity in Higher Education constructs valid productivity measures to supplement the body of information used to guide resource allocation decisions at the system state and national levels and to assist policymakers who must assess investments in higher education against other compelling demands on scarce resources By portraying the productive process in detail this report will allow stakeholders to better understand the complexities of and potential approaches to measuring institution system and national level performance in higher education *The Routledge Handbook of the Political Economy of Science* David Tyfield, Rebecca Lave, Samuel Randalls, Charles Thorpe, 2017-04-28 The political economy of research and innovation R I is one of the central issues of the early twenty first century Science and innovation are increasingly tasked with driving and reshaping a troubled global economy while also tackling multiple overlapping global challenges such as climate change or food security global pandemics or energy security But responding to these demands is made more complicated because R I themselves are changing Today new global patterns of R I are transforming the very structures institutions and processes of science and innovation and with it their claims about desirable futures Our understanding of R I needs to change accordingly Responding to this new urgency and uncertainty this handbook presents a pioneering selection of the growing body of literature that has emerged in recent years at the intersection of science and technology studies and political economy The central task for this research has been to expose important but consequential misconceptions about the political economy of R I and to build more insightful approaches This volume therefore explores the complex interrelations between R I both in general and in specific fields and political economies across a number of key dimensions from health to environment and universities to the military The Routledge Handbook of the Political Economy of Science offers a unique collection of texts across a range of issues in this burgeoning and important field from a global selection of top scholars The handbook is essential reading for students interested in the political economy of science technology and innovation It also presents succinct and insightful summaries of the state of the art for more advanced scholars Top Student, Top School? Alexandria Walton Radford, 2013-06-07 Most of us think that valedictorians can write their own ticket By reaching the top of their class they have proven their merit so their next logical step should be to attend the nation's very best universities Yet in *Top Student Top School* Alexandria Walton Radford of American Institutes for Research reveals that many valedictorians do not enroll in prestigious institutions Employing an original five state study that surveyed nine hundred public high school valedictorians she sets out to determine when and why valedictorians end up at less selective schools showing that social class makes all the difference Radford traces valedictorians paths to college and presents damning evidence that high schools do not provide sufficient guidance on crucial factors affecting college selection such as reputation financial aid and even the application process itself Left in a bewildering environment of seemingly similar options many students depend on their parents for assistance and this allows social class to rear its head and have a

profound impact on where students attend Simply put parents from less affluent backgrounds are far less informed about differences in colleges quality the college application process and financial aid options which significantly limits their child s chances of attending a competitive school even when their child has already managed to become valedictorian Top Student Top School pinpoints an overlooked yet critical juncture in the education process one that stands as a barrier to class mobility By focusing solely on valedictorians it shows that students paths diverge by social class even when they are similarly well prepared academically and this divergence is traceable to specific failures by society failures that we can and should address Watch an interview of Alexandria Walton Radford discussing her book here <http://www.youtube.com/watch?v=F81c1D1BpY0>
