Methods in Protein Structure Analysis M. Zouhair Atassi, Ettore Appella, 2013-06-29 The MPSA international conference is held in a different country every two years. It is devoted to methods of determining protein structure with emphasis on chemistry and sequence analysis. Until the ninth conference MPSA was an acronym for Methods in Protein Sequence Analysis. To give the conference more flexibility and breadth the Scientific Advisory Committee of the 10th MPSA decided to change the name to Methods in Protein Structure Analysis; however the emphasis remains on methods and on chemistry. In fact this is the only major conference that is devoted to methods. The MPSA conference is truly international, a fact clearly reflected by the composition of its Scientific Advisory Committee. The Scientific Advisory Committee oversees the scientific direction of the MPSA and elects the chairman of the conference. Members of the committee are elected by active members based on scientific standing and activity. The chairman, subject to approval of the Scientific Advisory Committee, appoints the Organizing Committee. It is this latter committee that puts the conference together. The lectures of the MPSA have traditionally been published in a special proceedings issue. This is different from and more detailed than the special MPSA issue of the Journal of Protein Chemistry in which only a brief description of the talks is given in short papers and abstracts. In the 10th MPSA about half the talks are by invited speakers and the remainder were selected from submitted short papers and abstracts.

Handbook of Seafood and Seafood Products Analysis Fidel Toldrá, Leo Nollet, 2024-03-08 Seafood and seafood products represent some of the most important foods in almost all types of societies around the world. More intensive production of fish and shellfish to meet high demand has raised some concerns related to the nutritional and sensory qualities of these cultured fish in comparison to their wild catch counterparts. In addition, the variety in processing, preservation, and storage methods from traditional to modern is contributing to an increase in variability in consumer products. This second edition of the Handbook of Seafood and Seafood Products Analysis brings together the work of 109 experts who focus on the most recent research and development trends in analytical techniques and methodologies for the analysis of captured fresh and preserved seafood, either cultivated or wild, as well as for derived products. After providing a general introduction, this handbook provides 48 chapters distributed in six sections. Chemistry and biochemistry focuses on the analysis of main chemical and biochemical compounds of seafood. Processing control describes the analysis of technological quality and the use of some non-destructive techniques as well as methods to check freshness, detection of species, and geographic origin and to evaluate smoke flavoring. Nutritional quality deals with the analysis of nutrients in seafood such as essential amino acids, bioactive peptides, antioxidants, vitamins, minerals, and trace elements and fatty acids. Sensory quality covers the sensory quality and main analytical tools to determine color, texture, flavor, and off-flavor quality index methods as well as sensory descriptors, sensory aspects of heat-treated seafood, and sensory perception. Biological Safety looks at tools for the detection of spoilage, pathogens, parasites, viruses, marine toxins, antibiotics, and GM ingredients.

Chemical Safety focuses on the identification of fish species detection of adulterations veterinary drug residues irradiation food contact materials and chemical toxic compounds from the environment generated during processing or intentionally added Key Features This comprehensive handbook provides a full overview of the tools now available for the analysis of captured fresh and preserved seafood either cultivated or wild as well as for derived products This is a comprehensive and informative book that presents both the merits and limitations of analytical techniques and also gives future developments for guaranteeing the quality of seafood and seafood products This cutting edge work covers processes used from all of the seven seas to ensure that consumers find safe nutritionally beneficial and appealing seafood products at their markets and restaurants This handbook covers the main types of worldwide available analytical techniques and methodologies for the analysis of seafood and seafood products
