James Birx,1991 Professor H James Birx shows how the never ending controversy of human evolution came to be He details the events that caused thinkers like Charles Darwin to develop his theory of evolution and what ideas caused some people to reconcile a somewhat mystical theology with a concrete model of the universe He tells you how Darwin s work infuriated everybody from God fearing Christians to the church heirarchies Birx explains how scientific advances and philosophical arguments have made beliefs about divine intervention as the origin of man a moot point He shows how creationism ignores proven scientific facts and how human evolution remains a much sounder truth You ll read how some western religions are starting to accept evolution as the process which creates life on earth You ll also learn why scientific evolution and creationism have not been accepted together and how bold attempts to merge the two ideas have failed miserably The Galapagos Marine Reserve Judith

The Zoological Record ,2003 **Island Life: Or, the Phenomena and Causes of Insular Faunas and Floras**

Alfred Russel Wallace, 1880 Wallace's Island Life is one of the foundation works of zoogeography. It focused on the detailed problems of animal dispersal and speciation. Like Darwin, Wallace classified islands as either oceanic (no previous connection to a land mass) or continental (previously connected to a land mass). He considered the means by which each class of island might become colonized, the types of animals most likely to perform the necessary migrations, and the conditions such as major climatic or geologic change under which the migrations might have been made. Wallace was the first to use the new knowledge of Pleistocene ice ages to explain certain phenomena of animal distribution, and in *Island Life* he speculated about the possible causes of glaciation. He was one of the few 19th-century scientists to realize that astronomical causes alone would not suffice but had to be combined with a corresponding elevation in the northern land mass.
