Stange,2004-08-17 This book the proceedings of the Falk Symposium No 139 on Gallstones Pathogenesis and Treatment held in Freiburg Germany on January 15 16 2004 reflects the tremendous advances in the field of biliary diseases both at the genetic and cellular as well as the clinical levels In industrialized countries gallstones are a frequent clinical entity with a prevalence of 10 15% In clinical practice one can differentiate between cholesterol stones black pigment stones and brown pigment stones 80 90% of gallbladder stones are cholesterol stones 10 20% are black pigment stones The prevalence of cholesterol stones increases with age and in Europe in the 70 age group reaches about 20% in males and about 30% in females Gallstones and gallstone diseases therefore are a frequent and important clinical problem The book addresses the basic aspects of gallstone pathogenesis as well as the non surgical and surgical treatment of gallstone diseases Of particular interest are the epidemiology and genetics of gallstone formation with definition of risk factors in particular of genetic predispositions Other

major aspects are the hepatocellular and biliary transport mechanisms that predispose to the formation of gallstones. Apart from cholesterol and lipid transport and absorption, gallbladder function plays a central role in gallstone formation. Another clinically very relevant topic is the treatment of gallstone diseases by drugs, endoscopic and other non-surgical interventions and surgery, as well as the long-term outcome of therapeutic interventions. The volume concludes with a state-of-the-art chapter on Gallstone Research in the Post Genomic Era. Gallstones: Pathogenesis and Treatment is an excellent update on the pathogenesis of gallstones as well as on the treatment of gallstone diseases, written by an international faculty of outstanding clinicians and scientists. The book will therefore be of great interest to hepatologists and gastroenterologists in academic institutions as well as in clinical practice.

Gallstone disease has afflicted man since antiquity but only in the past decade has it been recognized as a major health problem and been the subject of widespread investigation. This investigation initiated by the definition of the limits of cholesterol solubility in bile has led to our current understanding of the pathogenesis of gallstone formation and has provided the basis for a rational approach to the in situ dissolution and prevention of cholesterol gallstones. This volume comprises the papers and discussion which formed the Fourth International Symposium of the Canadian Foundation for Diseases of the Liver. The Symposium held in Montreal on May 12 and 13 1978 was designed to bring together investigators from various disciplines and to review the current status of cholesterol gallstone disease. The Editors wish to thank these experts for their lucid and important contributions. We also wish to thank Valerie M Price and Dianne McFee of the Canadian Foundation for Diseases of the Liver for their considerable and expert help in organizing the meeting and preparing this volume for publication.
