**The Application of Game Theory in the Study of International Relations** Jeffrey Spark, 1990 Strategic Choice and International Relations David A. Lake, Robert Powell, 2020-05-05 The strategic choice approach has a long pedigree in international relations In an area often rent by competing methodologies editors David A Lake and Robert Powell take the best of accepted and contested knowledge among many theories With the contributors to this volume they offer a unifying perspective which begins with a simple insight students of international relations want to explain the choices actors make whether these actors be states parties ethnic groups companies leaders or individuals This synthesis offers three new benefits first the strategic interaction of actors is the unit of analysis rather than particular states or policies second these interactions are now usefully organized into analytic schemes on which conceptual experiments may be based and third a set of methodological bets is then made about the most productive ways to analyze the interactions Together these elements allow the pragmatic application of theories that may apply to a myriad of particular cases such as individuals protesting environmental degradation governments seeking to control nuclear weapons or the United Nations attempting to mobilize member states for international peacekeeping Besides the editors the six contributors to this book all distinguished scholars of international relations are Jeffrey A Frieden James D Morrow Ronald Rogowski Peter Gourevitch Miles Kahler and Arthur A Stein Their work is an invaluable introduction for scholars and students of international relations

The authors reflect on the strengths and weaknesses of current methodology and suggest ways to advance theory and research in International Studies. This volume is essential reading for methods courses and will be of interest to scholars and students alike. See table of contents and excerpts. Frank P. Harvey is Professor of Political Science and Director of the Centre for Foreign Policy Studies at Dalhousie University. Michael Brecher is the R. B. **Predicting Politics** Bruce Bueno de Mesquita, 2002 To predict likely policy developments around the world over the next thirty years, Bruce Bueno de Mesquita uses game-theoretic models as described in *Predicting Politics*. The tools used in this book have found wide application in business and in the development of significant American foreign policy initiatives over the years. The author uses data from 1948 to show the ability of models to predict the end of the Cold War. He then turns to data from 1980 for about one hundred countries and simulates future states of the world, especially with regard to further democratization. In the process, he shows strong evidence that the burst of democratization that occurred at the end of the 1980s and the beginning of the 1990s was predictable based on replicable data known in 1980. While delving into rather gloomy predictions about likely developments in Russia and China's domestic affairs, he offers a novel explanation for the failure of Russia to attract more investment and to achieve the higher growth rates commonly associated with democratic government. Although Russia is certainly more democratic in an absolute sense today than it was in 1980, it has fallen farther behind the rest of the world in terms of democratization and so lacks the comparative advantages of property rights, rule of law and transparent governance that are essential for attracting investment. Bueno de Mesquita shows how policy situations and game-theoretical analyses can explain the past, illuminate the present and forecast future events. At the same time, he provides the tools necessary for others to create their own rigorous estimates of future foreign policies.
