semantics pragmatics interface linguistic logical and philosophical perspectives held at the University of Lille 3 in 2012 13 Scholars of linguistics logic and philosophy and those interested in the research benefits of crossing disciplines will find this work both accessible and thought provoking especially those with an interest in pragmatic theory or semantics **Skill and Billiards** Christopher James Archibald,2011 Computational pool is a relatively recent entrant into the group of games played by computer agents It features a novel combination of properties that distinguish it from other such games including continuous action and state spaces uncertainty in execution a unique turn taking structure and of course an adversarial nature This combination leads to new challenges both in modeling and reasoning about the game and in designing agents for effective play We address the modeling challenges by presenting a model of generalized billiards games and showing that an equilibrium exists within this model To address the practical challenges of designing an agent we discuss CueCard our agent which won the 2008 computational pool tournament with a special focus on which new advancements made this agent successful The second portion of the dissertation focuses on a topic inspired by the computational pool domain that of execution skill In many AI settings an agent is comprised of both action planning and action execution components We first present experimental work in which we examine the relationship between the precision of the execution component the intelligence of the planning component and the overall success of the agent within our computational pool framework Our motivation lies in determining whether higher execution skill rewards more strategic playing Finally we present a method for modeling imperfect execution skill in normal form games and examine the effect that changing execution skill levels can have in these games We then study games in which players have imperfect execution skill and one player s true skill is not common knowledge In these settings the possibility arises of a player hustling or pretending to have lower execution skill than they actually have Focusing on repeated zero sum games we provide a hustle proof strategy this strategy guarantees a player the same payoff without knowledge of the opponents execution skill level as they could guarantee with knowledge of the opponent s true execution skill level Bayesian Natural Language Semantics and Pragmatics Henk Zeevat,Hans-Christian Schmitz,2015-06-19 The contributions in this volume focus on the Bayesian interpretation of natural languages which is widely used in areas of artificial intelligence cognitive science and computational linguistics This is the first volume to take up topics in Bayesian Natural Language Interpretation and make proposals based on information theory probability theory and related fields The methodologies offered here extend to the target semantic and pragmatic analyses of computational natural language interpretation Bayesian approaches to natural language semantics and pragmatics are based on methods from signal processing and the causal Bayesian models pioneered by especially Pearl In signal processing the Bayesian method finds the most probable interpretation by finding the one that maximizes the product of the prior probability and the likelihood of the interpretation It thus stresses the importance of a production model for interpretation as in Grice s contributions to pragmatics or in interpretation by abduction The Philosophy of Theoretical Linguistics Ryan M.
