Theories of Intensionality David Parsons, 2016-09-16 This book offers a comprehensive primer for the study of intensionality. It explores and assesses those key theories of intensionality which have been developed in the twentieth and early twenty first centuries. Each of the examined theories is tested as to whether it can account for the problems associated with A the intersubstitution salva veritate of co extensional expressions and B existential generalisation. All of these theories are subsequently compared so as to determine which of them comes closest to successfully solving these problems. The book examines four kinds of intensionalist approaches: the Fregean approach including Church's formalisation of Frege's theory, the possible worlds approaches of Carnap, Montague and Cresswell, the theory of properties, relations and propositions devised by Bealer, and the Meinongian approaches put forward by Zalta and Priest. The book also proposes an alternative to intensionalism: sententialism. Sententialists argue that the problems of intensionality could be solved by appealing to linguistic items, usually sentences, rather than intensional entities. Drawing on the works of Quine, Davidson, Scheffler and R. M. Martin, it explores the viability and value of sententialism as an alternative to intensionalism.

A Critical Introduction to Scientific Realism Paul Dicken, 2016-07-28 What are the reasons for believing scientific theories to be true? The contemporary debate around scientific realism exposes questions about the very nature of scientific knowledge. A Critical Introduction to Scientific Realism explores and advances the main topics of the debate, allowing epistemologists to make new connections with the philosophy of science. Moving from its origins in logical positivism to some of the most recent issues discussed in the literature, this critical introduction covers the no miracles argument, the pessimistic meta induction, and structural realism. Placing arguments in their historical context, Paul Dicken approaches the scientific realism debate as a particular instance of our more general epistemological investigations. The recurrent theme is that the scientific realism debate is in fact a pseudo philosophical question. Concerned with the methodology of the scientific realism debate, Dicken asks what it means to offer an epistemological assessment of our scientific practices. Taking those practices as a guide to our epistemological reflections, A Critical Introduction to Scientific Realism fills a gap in current introductory texts and presents a fresh approach to understanding a crucial debate.

[Lack in the Beingstalk](#) Philip McShane, 2006-12-17 Proposes that a Calculus of Variations analogous to that which interested the early Husserl is to replace the isolation of individuals and disciplines and lead to genuine progress and economic justice. The reach beyond effete academic isolation implies that adult growth is viewed normatively as accelerating.

Pliny's Praise Paul Roche, 2011-05-26 Pliny's Panegyricus AD 100 survives as a unique example of senatorial rhetoric from the early Roman Empire. It offers an eyewitness account of the last years of Domitian's principate, the reign of Nerva, and Trajan's early years, and it communicates a detailed senatorial view on the behaviour expected of an emperor. It is an important document in the development of the ideals of imperial leadership, but it also contributes greatly to our understanding of imperial political culture more generally. This volume, the first ever devoted to the

Panegyricus contains expert studies of its key historical and rhetorical contexts as well as important critical approaches to the published version of the speech and its influence in antiquity. It offers scholars of Roman history, literature, and rhetoric an up-to-date overview of key approaches to the speech and students and interested readers an authoritative introduction to this vital and underappreciated speech.
