## Im Learning:

*Intrinsically Motivated Learning in Natural and Artificial Systems* Gianluca Baldassarre, Marco Mirolli, 2013-03-29 It has become clear to researchers in robotics and adaptive behaviour that current approaches are yielding systems with limited autonomy and capacity for self improvement To learn autonomously and in a cumulative fashion is one of the hallmarks of intelligence and we know that higher mammals engage in exploratory activities that are not directed to pursue goals of immediate relevance for survival and reproduction but are instead driven by intrinsic motivations such as curiosity interest in novel stimuli or surprising events and interest in learning new behaviours The adaptive value of such intrinsically motivated activities lies in the fact that they allow the cumulative acquisition of knowledge and skills that can be used later to accomplish fitness enhancing goals Intrinsic motivations continue during adulthood and in humans they underlie lifelong learning artistic creativity and scientific discovery while they are also the basis for processes that strongly affect human well being such as the sense of competence self determination and self esteem This book has two aims to present the state of the art in research on intrinsically motivated learning and to identify the related scientific and technological open challenges and most promising research directions The book introduces the concept of intrinsic motivation in artificial systems reviews the relevant literature offers insights from the neural and behavioural sciences and presents novel tools for research The book is organized into six parts the chapters in Part I give general overviews on the concept of intrinsic motivations their function and possible mechanisms for implementing them Parts II III and IV focus on three classes of intrinsic motivation mechanisms those based on predictors on novelty and on competence Part V discusses mechanisms that are complementary to intrinsic motivations and Part VI introduces tools and experimental frameworks for investigating intrinsic motivations The contributing authors are among the pioneers carrying out fundamental work on this topic drawn from related disciplines such as artificial intelligence robotics artificial life evolution machine learning developmental psychology cognitive science and neuroscience The book will be of value to graduate students and academic researchers in these domains and to engineers engaged with the design of autonomous adaptive robots

**The Alex Studies** Irene M. PEPPERBERG, Irene M Pepperberg, 2009-06-30 Can a parrot understand complex concepts and mean what it says Since the early 1900s most studies on animal human communication have focused on great apes and a few cetacean species Birds were rarely used in similar studies on the grounds that they were merely talented mimics that they were after all birdbrains

Experiments performed primarily on pigeons in Skinner boxes demonstrated capacities inferior to those of mammals these results were thought to reflect the capacities of all birds despite evidence suggesting that species such as jays crows and parrots might be capable of more impressive cognitive feats Twenty years ago Irene Pepperberg set out to discover whether the results of the pigeon studies necessarily meant that other birds particularly the large brained highly social parrots were incapable of mastering complex cognitive concepts and the rudiments of referential speech Her investigation and the bird at its center a male Grey parrot named Alex have since become almost as well known as their primate equivalents and no less a subject of fierce debate in the field of animal cognition This book represents the long awaited synthesis of the studies constituting one of the landmark experiments in modern comparative psychology **Forum** ,1988 *I Drum, Therefore I Am* Gareth Dylan Smith,2016-05-13 Despite their central role in many forms of music making drummers have been largely neglected in the scholarly literature on music and education But kit drummers are increasingly difficult to ignore While exponents of the drum kit are frequently mocked in popular culture they are also widely acknowledged to be central to the musical success and aesthetic appeal of any musical ensemble in which they are found Drummers are also making their presence felt in music education with increasing opportunities to learn their craft in formal contexts Drawing on data collected from in depth interviews and questionnaires Gareth Dylan Smith explores the identities practices and learning of teenage and adult kit drummers in and around London As a London based drummer and teacher of drummers Smith uses his own identity as participant researcher to inform and interpret other drummers accounts of their experiences Drummers learn in multi modal ways usually with a keen awareness of exemplars of their art and craft The world of kit drumming is highly masculine which presents opportunities and challenges to drummers of both sexes Smith proposes a new model of the Snowball Self which incorporates the constructs of identity realization learning realization meta identities and contextual identities Kit drummers identities practices and learning are found to be intertwined as drummers exist in a web of interdependence Drummers drum therefore they are they do and they learn in a rich tapestry of means and contexts

**Web Information Systems and Mining** Liu Wenyin,Xiangfeng Luo,Fu Lee Wang,Jingsheng Lei,2009-10-26 Researchers and professionals      Pedagogic Frailty and Resilience in the University Ian M. Kinchin,Naomi E. Winstone,2017-04-17 Pedagogic Frailty and Resilience in the University presents a theoretical model and a practical tool to support the professional development of reflective university teachers It can be used to highlight links to key issues in higher education Pedagogic frailty exists where the quality of interaction between elements in the evolving teaching environment succumbs to cumulative pressures that eventually inhibit the capacity to develop teaching practice Indicators of frailty can be observed at different resolutions from the individual to the departmental or the institutional Chapters are written by experts in their respective fields who critique the frailty model from the perspectives of their own research This will help readers to make practical links between established bodies of research literature and the concept of frailty and to form a coherent and integrated view of higher education This can then be explored and developed by individuals departments or institutions to inform and evaluate their own enhancement programmes This may support the development of greater resilience to the demands of the teaching environment In comparison with other commonly used terms we have found that the term frailty has improved resonance with the experiences of colleagues across the disciplines in higher education and elicits a personal sometimes emotional response to their professional situation that encourages positive dialogue debate and reflection that may lead to the enhancement of university teaching This book offers a particular route through the fractured discourses of higher education pedagogy creating a coherent and cohesive perspective of the field that may illuminate the experiences and observations of colleagues within the profession If we are to realise the promise of higher education we will need the concepts methods and reflections contained in this book Robert R Hoffman      *I am a Teacher (My trysts with life, truth, system & happiness)* Disha Experts,2017-09-01 I am a Teacher My trysts with life truth system the other a low performer their performance diverge by more than 50 percentile points within three years So a teacher makes all the difference But in spite of these realities Teachers are a relatively underserved community in terms of support training resources and products
