**Mediating Ideology in Text and Image** Inger

Lassen, Jeanne Strunck, Torben Vestergaard, 2006-01-01 While ideology has been treated widely in CDA literature the role played by the interaction of text and image in multiplying meaning and furthering ideological stances has not so far received a lot of attention Mediating Ideology in Text and Image offers a number of approaches to such analysis offering students and academics valuable tools for identifying possible discrepancies between the world and the way it is represented through various mediational means The authors common aim is one of assisting the audience in reading between the lines thus offering a variety of approaches that may contribute to a better understanding of how ideologies possibly work and how they may be denaturalised from text and image The articles in part I look at rhetorical strategies used in meaning construction processes unfolding in various kinds of mass media Part II focuses on the re semiotization of meaning and looks at how analysing the combination of text and image may contribute to a better understanding of ideological processes brought about by multimodal resources Foreword by Ruth Wodak

**Combinatorial Image Analysis** Reneta P. Barneva, Bhargab B.

Bhattacharya, Valentin E. Brimkov, 2016-01-05 This volume constitutes the refereed proceedings of the 17th International Workshop on Combinatorial Image Analysis IWCIA 2015 held in Kolkata India in November 2015 The 24 revised full papers and 2 invited papers presented were carefully reviewed and selected from numerous submissions The workshop provides theoretical foundations and methods for solving problems from various areas of human practice In contrast to traditional approaches to image analysis which implement continuous models float arithmetic and rounding combinatorial image analysis features discrete models using integer arithmetic The developed algorithms are based on studying combinatorial

properties of classes of digital images and often appear to be more efficient and accurate than those based on continuous models

*The Laboratory Computer* John Dempster, 2001-07-02 The *Laboratory Computer A Practical Guide for Physiologists and Neuroscientists* introduces the reader to both the basic principles and the actual practice of recording physiological signals using the computer It describes the basic operation of the computer the types of transducers used to measure physical quantities such as temperature and pressure how these signals are amplified and converted into digital form and the mathematical analysis techniques that can then be applied It is aimed at the physiologist or neuroscientist using modern computer data acquisition systems in the laboratory providing both an understanding of how such systems work and a guide to their purchase and implementation The key facts and concepts that are vital for the effective use of computer data acquisition systems A unique overview of the commonly available laboratory hardware and software including both commercial and free software A practical guide to designing one's own or choosing commercial data acquisition hardware and software

**Artificial Intelligence in Digital Pathology Image Analysis** Min Tang, Jialiang Yang, Li Xiao, 2024-09-25 Thanks to the development and deployment of whole slide imaging technology in pathology glass slides previously observed under a traditional microscope are now scanned and converted to digital images which are more beneficial for remote access portability and ease of sharing to facilitate telepathology More importantly digitization of glass slides paves the way towards the wide use of artificial intelligence AI tools including machine deep learning algorithms resulting in improved diagnostic accuracy In the past decade a large number of studies have demonstrated the remarkable success of AI particularly deep learning in digital pathology such as tumor region identification metastasis detection and patient prognosis Differing from handcrafted feature based approaches that take advantage of domain knowledge to delineate specific morphological measurements e.g. nuclei shape and size and tissue texture in the images as features for training deep learning is a paradigm of feature learning entirely driven by the image data and/or labels Herein the use of deep learning in pathological diagnosis can not only handle increased workloads and expertise shortages but also obviate subjective diagnosis from pathologists Yet there remain many scientific and technological challenges associated with the efficiency of deep learning algorithms for use in clinical practice For example deep learning requires a sufficient amount of training data for generalization and suffers from a lack of feature interpretability The overarching goal of this special issue is to highlight novel research accomplishments and directions related to advanced AI methodology development and applications in digital pathology
