Multisensory Imagery Simon Lacey, Rebecca Lawson, 2013-01-19 Is a pear sweeter than a peach Which of Mona Lisa's hands is crossed over the other What would the Moonlight Sonata sound like played by a brass band Although these are questions that appeal to mental imagery in a variety of sensory modalities mental imagery research has been dominated by visual imagery With the emergence of a well established multisensory research community however it is time to look at mental imagery in a wider sensory context Part I of this book provides overviews of unisensory imagery in each sensory modality including motor imagery together with discussions of multisensory and cross modal interactions synesthesia imagery in the blind and following brain damage and methodological considerations Part II reviews the application of mental imagery research in a range of settings including individual differences skilled performance such as sports and surgical training psychopathology and therapy through to stroke rehabilitation This combination of comprehensive coverage of the senses with reviews from both theoretical and applied perspectives not only complements the growing multisensory literature but also responds to recent calls for translational research in the multisensory field *Mental Representation and Processing of Geographic Knowledge* Thomas Barkowsky, 2003-07-01 In cognitive science mental representations of spatial knowledge are metaphorically referred to as cognitive maps However investigations in cognitive psychology reveal that the cognitive map metaphor is inadequate and that more suitable conceptions of human spatial knowledge processing are needed This book addresses mental processing of knowledge about geographic space from an AI point of view by presenting an experimental computational modeling approach Results about human memory and visual mental imagery from cognitive psychology are combined with AI techniques of spatial and diagrammatic knowledge processing The author develops the diagrammatic reasoning architecture MIRAGE as a comprehensive conception of human geographic knowledge processing
