Combinatorial Mathematics IV L. R. A. Casse,W. D. Wallis,2006-11-14 A First Course in Coding Theory Raymond Hill,1986 Algebraic coding theory is a new and rapidly developing subject popular for its many practical applications and for its fascinatingly rich mathematical structure This book provides an elementary yet rigorous introduction to the theory of error correcting codes Based on courses given by the author over several years to advanced undergraduates and first year graduated students this guide includes a large number of exercises all with solutions making the book highly suitable for individual study Combinatorics Robin J. Wilson,2016 How many possible sudoku puzzles are there In the lottery what is the chance that two winning balls have consecutive numbers Who invented Pascal s triangle it was not Pascal Combinatorics the branch of mathematics concerned with selecting arranging and listing or counting collections of objects works to answer all these questions Dating back some 3000 years and initially consisting mainly of the study of permutations and combinations its scope has broadened to include topics such as graph theory partitions of numbers block designs design of codes and latin squares In this Very Short Introduction Robin Wilson gives an overview of the field and its applications in mathematics and computer theory considering problems from the shortest routes covering certain stops to the minimum number of colours needed to colour a map with different colours for neighbouring countries ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective

new ideas and enthusiasm to make interesting and challenging topics highly readable

Information and Coding Theory Gareth A. Jones, J. Mary Jones, 2012-12-06 As this Preface is being written the twentieth century is coming to an end Historians may perhaps come to refer to it as the century of information just as its predecessor is associated with the process of industrialisation Successive technological developments such as the telephone radio television computers and the Internet have had profound effects on the way we live We can see pictures of the surface of Mars or the early shape of the Universe The contents of a whole shelf load of library books can be compressed onto an almost weightless piece of plastic Billions of people can watch the same football match or can keep in instant touch with friends around the world without leaving home In short massive amounts of information can now be stored transmitted and processed with surprising speed accuracy and economy Of course these developments do not happen without some theoretical basis and as is so often the case much of this is provided by mathematics Many of the first mathematical advances in this area were made in the mid twentieth century by engineers often relying on intuition and experience rather than a deep theoretical knowledge to lead them to their discoveries Soon the mathematicians delighted to see new applications for their subject joined in and developed the engineers practical examples into wide ranging theories complete with definitions theorems and proofs
