ABSTRACT

Child Sexual Abuse (CSA) as a complex and cross-cultural danger to young kids has existed for long. CSA can result in long-term mental health issues, such as eating disorders and depression, lasted until victims' adolescence and adulthood. Inappropriate sexual behaviors and CSA-involved post-traumatic stress disorder (PTSD) can also be caused with a high possibility. To help potential victims to prevent CSA efficiently and offer resultful interventions to CSA victims, relevant therapies, prevention guidelines and policies have been developed. The main aim of this literature review is to reorganize these useful prevention methods into a comprehensive guideline for directing non-offending caregivers and potential and existed CSA victims. A total of 26 empirical studies were included into this literature. Three levels of group-based prevention caution for different care-giving populations are studied and detailed intervening steps and focused issued for each prevalent therapy are summarized in this review.

Keywords: child sexual abuse, group-based prevention, psychological treatment

1. INTRODUCTION

Child sexual abuse (CSA) as a great threat to children has long been there, while there were few cultural and political responses towards child sexual abuse until the late 1970s [1]. Child sexual abuse was prevailingly denied to be existed before early 1970s and most of undeniable cases were imputed to the consequences of controlling mothers and disharmonious family or to behaviors made by particular ethnic or racial groups. The arduous difficulties for conviction in that century in a lack of policy and psychological knowledge went without saying and survivors of CSA no doubt suffered from great distress even throughout their whole lives.

Well-documented negative effects of CSA have been studied. Both short-term and long-term negative effects can be result to children by CSA which include but not limits to depression (i.e., a mood disorder that involves a persistent feeling of sadness and upset) [2], anxiety (i.e., a feeling of worry and nervousness)

2. METHODS

An extensive literature search was conducted using the academic database PSU e-library as well as Google Scholar. The following search terms as well as their derivatives were entered: child sexual abuse, prevention,

treatments, policy, family-based, school-based, CBT and internet offending. Studies were included in accordance with the following inclusion criteria: (i) included empirical data, (ii) made reference to other scientific journals, (iii), (iv), (v) have been published after 2000, (vi) CSA, (vii) and/or comorbidity and specificity. A total of 26 empirical studies were identified from the literature, 23 of which specifically assessed CSA and its involved knowledge.

3. THE PREVENTION OF CHILD SEXUAL ABUSE

CSA prevention can be designated as primary, secondary, and tertiary prevention these three types based on different target population [3]. Primary prevention as the most general and superior CSA prevention targets on all general populations with at all levels of risks of suffering from CSA and offers universal intervention techniques; parenting education classes and "Talking to Touching" child-focused classes [4] are two commonly viewed CSA primary preventions in daily. Policies involved in reducing the demand for children as sexual commodities and funds offered on supporting mental and physical health development of children are both generalized as vital components of preventing from CSA. Secondary prevention targets at-risk populations, such as
