More than Buildings Sérgio Padrão Fernandes, João Silva Leite, Carlos Dias Coelho, 2025-02-03

More than Buildings studies the buildings typology in Portuguese cities and their relationship with the program the way in which it responds to a function the territory where it is integrated and with time and the way in which built forms evolve The book is structured around a set of key theoretical texts that highlight the potential of knowledge about typology and its specific formal characteristics in the production of new architectural objects In this sense the book has a didactic value based on the theoretical synthesis it produces which allows it to expose certain spatial and formal attributes of the typologies and thus constitute a reference for new processes of architectural production The method of analysis and decomposition of the case studies presented in each chapter provide a useful reading and interpretation key for different readers The typology should be understood as a reference in the act of designing demonstrating how to understand the elementary formal and spatial principles For the municipal authorities or other political decision makers the book will enable them to interpret the value of typology and its relevance in the production of cities This data could be useful for example in planning actions that aim at preserving or converting urban areas of architectural value The book will be relevant to readers within an academic framework and in the professional field engaged in work around architecture cities planning and conservation
