The Horse in the Ancient World Carolyn Willekes, 2016-07-29 The domestication of the horse in the fourth millennium BC altered the course of mankind's future. Formerly a source only of meat, horses now became the prime mode of fast transport as well as a versatile weapon of war. Carolyn Willekes traces the early history of the horse through a combination of equine iconography, literary representations, fieldwork, and archaeological theory. She explores the ways in which horses were used in the ancient world, whether in regular cavalry formations harnessed to chariots as a means of reconnaissance in swift and deadly skirmishing such as by Scythian archers or as the key mode of mobility. Establishing a regional typology of ancient horses: Mediterranean, Central Asian, and Near Eastern, the author discerns within these categories several distinct subtypes. Explaining how the physical characteristics of each type influenced its use on the battlefield through grand strategy, singular tactics, and general deployment, she focuses on Egypt, Persia, and the Hittites as well as Greece and Rome. This is the most comprehensive treatment yet written of the horse in antiquity.

Science and Technology in World History James E. McClellan III, Harold Dorn, 2015-12-15 Arguably the best general history of science and technology ever published. Tracing the relationship between science and technology from the dawn of civilization to the early twenty-first century, James E. McClellan III and Harold Dorn's bestselling book argues that technology as applied science emerged relatively recently as industry and governments began funding scientific research that would lead directly to new or improved technologies. McClellan and Dorn identify two great scientific traditions: the useful sciences, which societies patronized from time immemorial, and the exploration of questions about nature itself, which the ancient Greeks originated. The authors examine scientific traditions that took root in China, India, and Central and South America as well as in a series of Near Eastern empires in late antiquity and the Middle Ages. From this comparative perspective, McClellan and Dorn survey the rise of the West, the Scientific Revolution of the seventeenth century, the Industrial Revolution, and the modern marriage of science and technology. They trace the development of world science and technology today while raising provocative questions about the sustainability of industrial civilization. This new edition of *Science and Technology in World History* offers an enlarged thematic introduction and significantly extends its treatment of industrial civilization and the technological supersystem built on the modern electrical grid. The Internet and social media receive increased attention. Facts and figures have been thoroughly updated, and the work includes a comprehensive Guide to Resources incorporating the major published literature along with a vetted list of websites and Internet resources for students and lay readers.
