**The Rhetorical Turn** Herbert W. Simons, 2011-02-15 We have only recently started to challenge the notion that serious inquiry can be free of rhetoric that it can rely exclusively on hard fact and cold logic in support of its claims Increasingly scholars are shifting their attention from methods of proof to the heuristic methods of debate and discussion the art of rhetoric to examine how scholarly discourse is shaped by tropes and figures by the naming and framing of issues and by the need to adapt arguments to ends audiences and circumstances Herbert W Simons and the contributors to this important collection of essays provide impressive evidence that the new movement referred to as the rhetorical turn offers a rigorous way to look within and across the disciplines The Rhetorical Turn moves from biology to politics via excursions into the rhetorics of psychoanalysis decision science and conversational analysis Topics explored include how rhetorical invention guides scientific invention how rhetoric assists political judgment and how it integrates varying approaches to meta theory Concluding with four philosophical essays this volume of case studies demonstrates how the inventive and persuasive dimensions of scholarly discourse point the way to forms of argument appropriate to our postmodern age *The Book of Firsts* Peter D'Epiro, 2010-03-09 The Book of Firsts is an entertaining enlightening and highly browsable tour of the major innovations of the past twenty centuries and how they shaped our world Peter D Epiro makes this handy overview of human history both fun and thought provoking with his survey of the major firsts inventions discoveries political and military upheavals artistic and scientific breakthroughs religious controversies and catastrophic events of the last two thousand years Who was the first to use gunpowder Invent paper Sack the city of Rome Write a sonnet What was the first university The first astronomical telescope The first great novel The first Impressionist painting The Book of Firsts explores these questions and many more from the earliest surviving cookbook featuring parboiled flamingo and the origin of chess sixth century India to the first civil service exam China in 606 AD and the first tell all memoir about scandalous royals Byzantine Emperor Justinian and Empress Theodora In the form of 150 brief witty erudite and information packed essays The Book of Firsts is ideal for anyone interested in an enjoyable way to acquire a deeper understanding of history and the fascinating personalities who forged it *Scientific Knowledge as a Culture* Igal Galili, 2022-02-01 This book in its first part contains units of conceptual history of several topics of physics based on the research in physics education and research based articles with regard to several topics involved in teaching science in general and physics in particular The second part of the book includes the framework used the approach considering science knowledge as a special type of culture discipline culture Within this approach scientific knowledge is considered as comprised of a few inclusive fundamental theories each hierarchically structured in a triadic pattern nucleus body periphery While nucleus incorporates the basic principles and body comprises their implementations in the variety of laws models and experiments periphery includes concepts at odds to the nucleus This structure introduces knowledge in its conceptual variation thus converting disciplinary knowledge to cultural disciplinary one

The approach draws on history and philosophy of science HPS necessary for meaningful learning of science It is exemplified in several aspects regarding teaching physics presenting history in classes considering the special nature of science and using artistic images in regular teaching The revealed conceptual debate around the chosen topics clarifies the subject matter for school students and teachers encouraging construction of Cultural Content Knowledge Often missed in teachers preparation and common curriculum it helps genuine understanding of science thus providing remedy of students misconceptions reported in educational research

clarifies misunderstandings of Eucharistic sacrifice and renders transubstantiation accessible to beginners Blankenhorn concludes with a study of the consecration the minister of the Eucharist and the fruits of communion The chapter on the debate over the words of institution and the epiclesis gives a fresh perspective that integrates both eastern and western tradition The study of the Eucharistic celebrant strikes a balance between a spirituality of the priest as acting in persona Christi and of the priest as praying in persona ecclesiae The concluding chapter centers on the Eucharist's unitive mystical fruits in the Church This textbook is ideal for an advanced undergraduate or graduate course on Eucharistic theology It also seeks to advance the debate on several controversial historical and speculative issues in sacramental theology
