## **Fisheries Processing Biotechnological Applications:**

**Fisheries Processing** A.M. Martin,2012-12-06 The fish processing industry is still far from the levels of scientific and technological development that characterize other food processing operations. It has also been slow in finding uses for by products and processing wastes compared with the meat and poultry industries. The utilization of fisheries by products or wastes constitutes an area in which the application of modern techniques could potentially improve profitability. At present increased attention is being focused on the application of new biotechnological methods to operations related to the seafood industry with the objective of increasing its general efficiency. Because fish processing operations are commonly carried out in the vicinity of the sea most of the resulting fish wastes have been disposed of by returning them to it. Pollution control measures and a better understanding of the valuable composition of the products extracted from the sea are expected to encourage their recovery and the development of new products from them. In the past fisheries wastes and species not used for food have been generally utilized through technological processes with a low level of sophistication such as those for the production of animal feed and fertilizer. Limited economic success has accompanied the application of physical and chemical processes for the recovery of non utilized fisheries biomass and for the production of quality products from them.

**Fisheries Processing: Biotechnological Applications** Arnold C. Long,2008-01-01 The Aquaculture Industry Is Currently Faced With Solving The Simultaneous Problems Of Developing Economically Viable Production Systems Reducing The Impact On The Environment And Improving Public Perception. Significant Progress Has Been Made In Understanding And Design Of Production Systems. Improvement In Cultured Stocks Has Not Kept Pace With Productivity Demands.

**Fisheries Processing** Neelima Puri,2012 *Advances in Fisheries Biotechnology* Pramod Kumar Pandey,Janmejay Parhi,2022-02-10 The book covers various biotechnological research efforts and their applications in fisheries and aquaculture especially in the area of fish breeding health management nutrition and culture. Application of the recent biotechnological tools like Transcriptomics Transgenesis Nanotechnology Metabolomics RNAi and CRISPRi Technologies in the field of fisheries research are included in the book. Topics like conservation genetics for management of fishery resources are also covered in the book. It aims at addressing the growing need of the biotechnology in advancing the cause of aquaculture with a view to provide food and nutritional security to the world. This book will be of immense use to teachers researchers academicians development officials and policymakers involved in R D of fisheries and aquaculture sectors. Also the book serves as an additional reading material for undergraduate and graduate students of fisheries marine sciences ecology aquaculture and environmental sciences. The research in aquaculture biotechnology is likely to have significant impact on aquaculture and fisheries by way of supporting nutritional food security to the growing population. *Fish Processing* George M. Hall,2011-06-13 This book seeks to address the challenges facing the international seafood industry via a two pronged approach by offering the latest information on established technologies and introducing new ideas and

technologies An introductory chapter sets the tone for the book by presenting the background against which fish processing will exist in the near future Chapter two looks at the environmental and sustainability issues relating to conventional fish processing including processing efficiency and better use of the outputs currently considered wastes The impact of mechanisation and computerisation on environmental sustainability is also addressed Subsequent chapters examine the latest developments in established fish processing technologies such as canning curing freezing and chilling with an emphasis on the environmental aspects of packaging and the process itself In addition quality and processing parameters for specific species including new species are described The second part of the book gives authors the opportunity to introduce the potential technologies and applications of the future to a wider audience These include fermented products and their acceptance by a wider audience the utilisation of fish processing by products as aquaculture feeds and the use of by products for bioactive compounds in biomedical nutraceutical cosmetic and other applications
