Noncommutative algebras rings and other noncommutative objects along with their more classical commutative counterparts have become a key part of modern mathematics physics and many other fields The q deformed Heisenberg algebras defined by deformed Heisenberg canonical commutation relations of quantum mechanics play a distinguished role as important objects in pure mathematics and in many applications in physics The structure of commuting elements in an algebra is of fundamental importance for its structure and representation theory as well as for its applications The main objects studied in this monograph are q deformed Heisenberg algebras more specifically commuting elements in q deformed Heisenberg algebras In this book the structure of commuting elements in q deformed Heisenberg algebras is studied in a systematic way Many new results are presented with complete proofs Several appendices with some general theory used in other parts of the book include material on the Diamond lemma for ring theory a theory of degree functions in arbitrary associative algebras and some basic facts about q combinatorial functions over an arbitrary field The bibliography contains in addition to references on q deformed Heisenberg algebras some selected references on related subjects and on existing and potential applications The book is self contained as far as proofs and the background material are concerned In addition to research and reference purposes it can be used in a special course or a series of lectures on the subject or as complementary material to a general course on algebra Specialists as well as doctoral and advanced undergraduate students in mathematics and physics will find this book useful in their research and study

Connections in Discrete Mathematics Steve Butler, Joshua Cooper, Glenn Hurlbert, 2018-06-14 Discrete mathematics has been rising in prominence in the past fifty years both as a tool with practical applications and as a source of new and interesting mathematics The topics in discrete mathematics have become so well developed that it is easy to forget that common threads connect the different areas and it is through discovering and using these connections that progress is often made For over fifty years Ron Graham has been able to illuminate some of these connections and has helped to bring the field of discrete mathematics to where it is today To celebrate his contribution this volume brings together many of the best researchers working in discrete mathematics including Fan Chung Erik D Demaine Persi Diaconis Peter Frankl Alfred W Hales Jeffrey C Lagarias Allen Knutson Janos Pach Carl Pomerance N J A Sloane and of course Ron Graham himself *Scientific Essays In Honor Of H Pierre Noyes On The Occasion Of His 90th Birthday* Louis H Kauffman, John C Amson, 2013-11-26 This book is a Festschrift for the 90th birthday of the physicist Pierre Noyes The book is a representative selection of papers on the topics that have been central to the meetings over the last three decades of ANPA the Alternative Natural Philosophy Association ANPA was founded by Pierre Noyes and his colleagues the philosopher linguist physicist Frederick Parker Rhodes the physicist Ted Bastin and the mathematicians Clive Kilmister John Amson Many of the topics in the book center on the combinatorial hierarchy discovered by the originators of ANPA Other topics explore geometrical cosmological and biological aspects of those ideas and foundational aspects related to discrete physics and emergent quantum mechanics The book will be useful to readers interested in fundamental physics and particularly to readers looking for new and important viewpoints in Science that contain the seeds of futurity [Mathematics for the Analysis of Algorithms](#) Daniel H. Algebraic Combinatorics and Computer Science H. Crapo, D. Senato, 2012-12-06 This book dedicated to the memory of Gian Carlo Rota is the result of a collaborative effort by his friends students and admirers Rota was one of the great thinkers of our times innovator in both mathematics and phenomenology I feel moved yet touched by a sense of sadness in presenting this

volume of work despite the fear that I may be unworthy of the task that befalls me Rota both the scientist and the man was marked by a generosity that knew no bounds His ideas opened wide the horizons of fields of research permitting an astonishing number of students from all over the globe to become enthusiastically involved The contagious energy with which he demonstrated his tremendous mental capacity always proved fresh and inspiring Beyond his renown as gifted scientist what was particularly striking in Gian Carlo Rota was his ability to appreciate the diverse intellectual capacities of those before him and to adapt his communications accordingly This human sense complemented by his acute appreciation of the importance of the individual acted as a catalyst in bringing forth the very best in each one of his students Whosoever was fortunate enough to enjoy Gian Carlo Rota's longstanding friendship was most enriched by the experience both mathematically and philosophically and had occasion to appreciate son cote de bon vivant The book opens with a heartfelt piece by Henry Crapo in which he meticulously pieces together what Gian Carlo Rota's untimely demise has bequeathed to science

Advances in Combinatorial Methods and Applications to Probability and Statistics N. Balakrishnan, 2012-12-06 Sri Gopal Mohanty has made pioneering contributions to lattice path counting and its applications to probability and statistics. This is clearly evident from his lifetime publications list and the numerous citations his publications have received over the past three decades. My association with him began in 1982 when I came to McMaster University. Since then I have been associated with him on many different issues at professional as well as cultural levels. I have benefited greatly from him on both these grounds. I have enjoyed very much being his colleague in the statistics group here at McMaster University and also as his friend. While I admire him for his honesty, sincerity and dedication, I appreciate very much his kindness, modesty and broad mindedness. Aside from our common interest in mathematics and statistics, we both have great love for Indian classical music and dance. We have spent numerous many different subjects associated with the Indian music and hours discussing dance. I still remember fondly the long drive to Amherst, Massachusetts. I had a few years ago with him and his wife Shantimayee and all the hearty discussions we had during that journey.

Combinatorics and applications of combinatorial methods in probability and statistics has become a very active and fertile area of research in the recent past.

Numerical Mathematics and Advanced Applications Miloslav Feistauer, Vit Dolejší, Peter Knobloch, Karel Najzar, 2012-12-06. These proceedings collect the major part of the lectures given at ENUMATH2003, the European Conference on Numerical Mathematics and Advanced Applications held in Prague, Czech Republic from 18 August to 22 August 2003. The importance of numerical and computational mathematics and scientific computing is permanently growing. There is an increasing number of different research areas where numerical simulation is necessary. Let us mention fluid dynamics, continuum mechanics, electromagnetism, phase transition, cosmology, medicine, economics, finance etc. The success of applications of numerical methods is conditioned by changing its basic instruments and looking for new appropriate techniques adapted to new problems as well as new computer architectures. The ENUMATH conferences were established in order to provide a forum for discussion of current topics of numerical mathematics. They seek to convene leading experts and young scientists with special emphasis on contributions from Europe. Recent results and new trends are discussed in the analysis of numerical algorithms as well as in their applications to challenging scientific and industrial problems. The first ENUMATH conference was organized in Paris in 1995, then the series continued by the conferences in Heidelberg 1997, Jyväskylä 1999 and Ischia Porto 2001. It was a great pleasure and honour for the Czech numerical community that it was decided at Ischia Porto to organize the ENUMATH2003 in Prague. It was the first time when this conference crossed the former Iron Curtain and was organized in a postsocialist country.
