Fingerprint Identification System

Peter Komarinski

Fingerprint Identification System:

Automated Fingerprint Identification Systems (AFIS) Peter Komarinski, 2005-01-20 An easy to understand synopsis of identification systems presenting in simple language the process of fingerprint identification from the initial capture of a set of finger images to the production of a Rapsheet No other single work exists which reviews this important identification process from beginning to end We examine the identification process for latent crime scene prints and how they are identified with these systems While the primary focus is automated fingerprint identifications the book also touches on the emergence and use of fingerprints in other biometric systems Criminal justice administrators policy makers and students of forensic science and criminal justice will find a reference to the known limitations and advantages of these systems This book provides information as to the critical and continual need for properly trained individuals as well as an understanding of the direct and indirect costs associated with maintaining these systems An understanding of the entire system and what it means will prove invaluable Why are there missed identifications Why are identifications made on one database that are not made on another database Key terms and issues are included and well as suggestions for improving the overall number of identifications The book will go beyond process and also discuss issues such as interoperability management strategies for large databases contract development lights out verification and several other issues which impact automated identifications The first comprehensive title on this subject area Outlines in detail the entire process of fingerprint gathering and identity verification The future of AFIS will is discussed including national standards in developing multi agency cooperation interoperability U S in addition to the use of AFIS identification world wide **Automatic Fingerprint Recognition**

Systems Nalini Ratha, Ruud Bolle, 2007-05-08 An authoritative survey of intelligent fingerprint recognition concepts technology and systems is given Editors and contributors are the leading researchers and applied R D developers of this personal identification biometric security topic and technology Biometrics and pattern recognition researchers and professionals will find the book an indispensable resource for current knowledge and technology in the field Automated Fingerprint Identification Edward P. Jackson, 2015 From its inception more than 100 years ago fingerprint technology has come a long way This book provides background on and traces the recent history of automated fingerprint identification systems Included in the book is a brief examination of standards and the role of algorithms In its history fingerprints have been used to identify criminal and terrorist suspects perform background checks and monitor immigration status among other applications Prints found at the scene of a crime referred to as latent prints are compared with fingerprint records of known individuals who have been convicted of or arrested for a crime Law enforcement agencies have been working to automate this comparison process This book also provides the current landscape of latent Automated Fingerprint Identification System AFIS interoperability meaning the ability to share information between networks systems components etc The book addresses essential elements of interoperability outlines recent advances in the field and provides a high level

strategic plan for Federal agencies to implement the necessary requirements for interoperability to enhance public safety

The Fingerprint Identification System Paladin Press,1988 **The FBI fingerprint identification automation program : issues and options.** , *Automated Fingerprint Identification System (AFIS) Reference Guide* Jackie Front,Sheila Lally,John Firman,Illinois Criminal Justice Information Authority,1990 **Handbook of Fingerprint Recognition** Davide Maltoni,Dario Maio,Anil K. Jain,Salil Prabhakar,2009-04-21 A major new professional reference work on fingerprint security systems and technology from leading international researchers in the field Handbook provides authoritative and comprehensive coverage of all major topics concepts and methods for fingerprint security systems This unique reference work is an absolutely essential resource for all biometric security professionals researchers and systems administrators Automated Fingerprint Identification System (AFIS) International Association for Identification. AFIS Committee,2002 **A Semi-automated Single Fingerprint Identification System** J. H. Wegstein,1969 A system is described in which a fingerprint is manually coded by tracing certain ridges and noting events such as ridge endings and ridge beginnings This code is sent by teleprinter to a central file where a computer identifies the fingerprint by comparing the code with codes previously entered in the file The scheme for comparing codes is given along with some preliminary test results using typical fingerprints Author **Automated Fingerprint Identification** Carroll D. Buracker,William K. Stover,1984 **Multimodal Biometric Identification System** Sampada Dhole,Vinayak Bairagi,2024-11-12 This book presents a novel method of multimodal biometric fusion using a random selection of biometrics which covers a new method of feature extraction a new framework of sensor level and feature level fusion Most of the biometric systems presently use unimodal systems which have several limitations Multimodal systems can increase the matching accuracy of a recognition system This monograph shows how the problems of unimodal systems can be dealt with efficiently and focuses on multimodal biometric identification and sensor level feature level fusion It discusses fusion in biometric systems to improve performance Presents a random selection of biometrics to ensure that the system is interacting with a live user Offers a compilation of all techniques used for unimodal as well as multimodal biometric identification systems elaborated with required justification and interpretation with case studies suitable figures tables graphs and so on Shows that for feature level fusion using contourlet transform features with LDA for dimension reduction attains more accuracy compared to that of block variance features Includes contribution in feature extraction and pattern recognition for an increase in the accuracy of the system Explains contourlet transform as the best modality specific feature extraction algorithms for fingerprint face and palmprint This book is for researchers scholars and students of Computer Science Information Technology Electronics and Electrical Engineering Mechanical Engineering and people working on biometric applications **Request for Information** Texas. Identification Systems Thomas F. Wilson, Paul L. Woodard, 1987 *A SURVEY ON VARIOUS APPROACHES TO FINGERPRINT MATCHING FOR PERSONAL VERIFICATION AND IDENTIFICATION* Shoba Dyre, C.P. Sumathi, Automatic Fingerprint authentication for personal identification and verification has received considerable attention over the past decades among various biometric techniques because of the distinctiveness and persistence properties of fingerprints. Now fingerprints are set to explode in popularity as they are being used to secure smart phones and to authorize payments in online stores. The main objective of this paper is to review the extensive research work that has been done over the past decade and discuss the various approaches proposed for fingerprint matching.

Automated Fingerprint Identification System Joseph H. Wegstein, 1982 *Biometric Technologies and Verification Systems* John R. Vacca, 2007-03-16 Biometric Technologies and Verification Systems is organized into nine parts composed of 30 chapters including an extensive glossary of biometric terms and acronyms. It discusses the current state of the art in biometric verification authentication identification and system design principles. It also provides a step by step discussion of how biometrics works how biometric data in human beings can be collected and analyzed in a number of ways how biometrics are currently being used as a method of personal identification in which people are recognized by their own unique corporal or behavioral characteristics and how to create detailed menus for designing a biometric verification system. Only biometrics verification authentication is based on the identification of an intrinsic part of a human being. Tokens such as smart cards magnetic stripe cards and physical keys can be lost stolen or duplicated. Passwords can be forgotten shared or unintentionally observed by a third party. Forgotten passwords and lost smart cards are a nuisance for users and an expensive time waster for system administrators. Biometric security solutions offer some unique advantages for identifying and verifying authenticating human beings over more traditional security methods. This book will serve to identify the various security applications biometrics can play a highly secure and specific role in. Contains elements such as Sidebars Tips Notes and URL links. Heavily illustrated with over 150 illustrations screen captures and photographs. Details the various biometric technologies and how they work while providing a discussion of the economics privacy issues and challenges of implementing biometric security solutions.
