A Computer Oriented Single-fingerprint Identification System J. H. Wegstein, 1968 A procedure is described for computing a set of numerical descriptors that identify a single fingerprint The procedure starts with the X and Y coordinates and the individual directions of the minutiae ridge endings and bifurcations of a fingerprint impression Sets of descriptors are computed corresponding to groups or constellations of these minutiae Descriptors corresponding to various fingerprint impressions are stored on magnetic tape A fragment of a fingerprint impression such as occurs in a latent fingerprint may also be used A second computer program reads the descriptors corresponding to two different fingerprint impressions from magnetic tape A score is computed that indicates how well the two impressions match Preliminary experimental results suggest that this procedure might be suitable as a basis for a single fingerprint classification system Author **ICMLG 2017 5th International Conference on Management Leadership and Governance** Dr Thabang Mokoteli, 2017-03

Brain Fingerprint Identification Wanzeng Kong, Xuanyu Jin, 2025-07-05 This open access book delves into the emerging field of biometric identification using brainwave patterns Specifically this book presents recent advances in electroencephalography EEG based biometric recognition to identify unique neural signatures that can be used for secure authentication and identification Traditional biometric systems such as fingerprints iris scans and face recognition have become integral to security and identification However these methods are increasingly vulnerable to spoofing and other forms of attack Unlike other traditional biometrics EEG signals are non invasive continuous authentication liveness detection and resistance to coercion due to the complexity and uniqueness of brain patterns Therefore it is particularly suitable for high security fields such as military and finance providing a promising alternative for future high security identification and authentication However most of the existing brain fingerprint identification studies require subjects to perform specific cognitive tasks which limits the popularization and application of brain fingerprint identification in practical scenarios Additionally due to the low signal to noise ratio SNR and time varying characteristics of EEG signals there are distribution differences in EEG data across sessions from several days leading to stability issues in brain fingerprint features extracted at different sessions Finally because the EEG signal is affected by the coupling of multiple factors and the nervous system has continuous spontaneous variability which makes it difficult for the brain fingerprint identification model to be suitable for the scenarios of unseen sessions and cognitive tasks and there is the problem of insufficient model generalization In this book based on traditional machine learning methods and deep learning methods the authors will carry out multi task single session single task multi session and multi task multi session brain fingerprint identification research respectively for the above problems to provide an effective solution for the application of brain fingerprint identification in practical scenarios

Techniques in Fingerprint and Face Recognition L.C. Jain,U. Halici,I. Hayashi,S.B. Lee,Shigeyoshi Tsutsui,2022-01-26

The tremendous world wide interest in intelligent biometric techniques in fingerprint and face recognition is fueled by the myriad of potential applications including banking and security systems and limited only by the imaginations of scientists and engineers This growing interest poses new challenges to the fields of expert systems neural networks fuzzy systems and evolutionary computing which offer the advantages of learning abilities and human like behavior Authored by a panel of international experts this book presents a thorough treatment of established and emerging applications and techniques relevant to this field **NETWORKING 2009** Luigi Fratta,Henning Schulzrinne,Yutaka Takahashi,Otto Spaniol,2009-05-07

What a difference a year makes 52 little weeks This variation of the first line from Dinah Washington's famous song which originally reads What a difference a day makes 24 little hours brings it to the point According to all experts the press and most people's impression we are today in a serious economic recession Less than one year ago we practically lived on the island of the blessed namely at Networking 2008 that was held on the island of Singapore or in the famous country where milk and honey flow or where wine and liquor flow This convenient situation has changed abruptly within less than 52 weeks It looks like the same kind of problems has emerged in all areas and the Networking area has of course been affected too Looking into the 2009 proceedings however you will immediately notice that the manuscripts are largely unaffected by any aspect of the economic crisis which should be a bit of a consolation Apparently research directions are dictated by a process that is all too sluggish in order to be quickly and radically changed by a tsunami Likewise the conference itself was prepared in spite of such a crisis **Handbook of Biometric Anti-Spoofing** Sébastien Marcel,Mark S.
