Finite Presentability Of S Arithmetic Groups:

Finite Presentability of S-Arithmetic Groups. Compact Presentability of Solvable Groups Herbert Abels, 2006-11-15 The problem of determining which S arithmetic groups have a finite presentation is solved for arbitrary linear algebraic groups over finite extension fields of \mathbb{Q} . For certain solvable topological groups this problem may be reduced to an analogous problem that of compact presentability. Most of this monograph deals with this question. The necessary background material and the general framework in which the problem arises are given partly in a detailed account partly in survey form. In the last two chapters the application to S arithmetic groups is given here the reader is assumed to have some background in algebraic and arithmetic group. The book will be of interest to readers working on infinite groups, topological groups and algebraic and arithmetic groups. **Proceedings of Groups - St. Andrews 1985** E. F. Robertson, 1986 A current picture of progress and research in group theory is provided by five leading group theorists: Baumslag, Neumann, Roseblade and Tits.

Finite Presentability of S-arithmetic Groups, 1964 *Arithmetic Groups and Their Generalizations* Lizhen Ji, 2008 In one guise or another many mathematicians are familiar with certain arithmetic groups such as \mathbb{Z} or $SL_n(\mathbb{Z})$. Yet many applications of arithmetic groups and many connections to other subjects within mathematics are less well known. Indeed arithmetic groups admit many natural and important generalizations. The purpose of this expository book is to explain through some brief and informal comments and extensive references what arithmetic groups and their generalizations are, why they are important to study and how they can be understood and applied to many fields such as analysis, geometry, topology, number theory, representation theory and algebraic geometry. It is hoped that such an overview will shed a light on the important role played by arithmetic groups in modern mathematics. Titles in this series are co-published with International Press, Cambridge, MA. Table of Contents: Introduction, General comments on references, Examples of basic arithmetic groups, General arithmetic subgroups and locally symmetric spaces, Discrete subgroups of Lie groups and arithmeticity of lattices in Lie groups, Different completions of \mathbb{Q} and S arithmetic groups over number fields, Global fields and S arithmetic groups over function fields, Finiteness properties of arithmetic and S arithmetic groups, Symmetric spaces, Bruhat-Tits buildings and their arithmetic quotients, Compactifications of locally symmetric spaces, Rigidity of locally symmetric spaces, Automorphic forms and automorphic representations for general arithmetic groups, Cohomology of arithmetic groups, K-groups of rings of integers and K-groups of group rings, Locally homogeneous manifolds and period domains, Non-cofinite discrete groups, Geometrically finite groups, Large scale geometry of discrete groups, Tree lattices, Hyperbolic groups, Mapping class groups and outer automorphism groups of free groups, Outer automorphism group of free groups and the outer spaces, References, Index, Review from Mathematical Reviews. The author deserves credit for having done the tremendous job of encompassing every aspect of arithmetic groups visible in today's mathematics in a systematic manner. The book should be an important guide for some time to come. AMSIP 43 **Twin Buildings and Applications to**

S-Arithmetic Groups Peter Abramenko, 2006-11-14 This book is addressed to mathematicians and advanced students interested in buildings groups and their interplay Its first part introduces presupposing good knowledge of ordinary buildings the theory of twin buildings discusses its group theoretic background twin BN pairs investigates geometric aspects of twin buildings and applies them to determine finiteness properties of certain S arithmetic groups This application depends on topological properties of some subcomplexes of spherical buildings The background of this problem some examples and the complete solution for all sufficiently large classical buildings are covered in detail in the second part of the book

Algebraic Groups and Number Theory Vladimir Platonov, Andrei Rapinchuk, Rachel Rowen, 1993-12-07 This milestone work on the arithmetic theory of linear algebraic groups is now available in English for the first time Algebraic Groups and Number Theory provides the first systematic exposition in mathematical literature of the junction of group theory algebraic geometry and number theory The exposition of the topic is built on a synthesis of methods from algebraic geometry number theory analysis and topology and the result is a systematic overview of almost all of the major results of the arithmetic theory of algebraic groups obtained to date

Algebraic Groups and Number Theory: Volume 1 Vladimir Platonov, Andrei Rapinchuk, Igor Rapinchuk, 2023-09-07 The first edition of this book provided the first systematic exposition of the arithmetic theory of algebraic groups This revised second edition now published in two volumes retains the same goals while incorporating corrections and improvements as well as new material covering more recent developments Volume I begins with chapters covering background material on number theory algebraic groups and cohomology both abelian and non abelian and then turns to algebraic groups over locally compact fields The remaining two chapters provide a detailed treatment of arithmetic subgroups and reduction theory in both the real and adelic settings Volume I includes new material on groups with bounded generation and abstract arithmetic groups With minimal prerequisites and complete proofs given whenever possible this book is suitable for self study for graduate students wishing to learn the subject as well as a reference for researchers in number theory algebraic geometry and related areas

Classical Groups and Related Topics Alexander Hahn, Donald G. James, Zhexian Wan, 1989 During his lifetime L K Hua played a leading role in and exerted a great influence upon the development in China of modern mathematics both pure and applied His mathematical career began in 1931 at Tsinghua University where he continued as a professor for many years Hua made many significant contributions to number theory algebra geometry complex analysis numerical analysis and operations research In particular he initiated the study of classical groups in China and developed new matrix methods which as applied by him as well as his followers were instrumental in the successful attack of many problems To honor his memory a joint China U S conference on Classical Groups and Related Topics was held at Tsinghua University in Beijing in May 1987 This volume represents the proceedings of that conference and contains both survey articles and research papers focusing on classical groups and closely related topics

The Classical Groups and K-Theory Alexander J. Hahn, O. Timothy O'Meara, 2013-03-09 It is a great satisfaction for a mathematician to witness the growth and expansion of a theory in which he has taken some part during its early years When H Weyl coined the words classical groups foremost in his mind were their connections with invariant theory which his famous book helped to revive Although his approach in that book was deliberately algebraic his interest in these groups directly derived from his pioneering study of the special case in which the scalars are real or complex numbers where for the first time he injected Topology into Lie theory But ever since the definition of Lie groups the analogy between simple classical groups over finite fields and simple classical groups over \mathbb{R} or \mathbb{C} had been observed even if the concept of simplicity was not quite the same in both cases With the discovery of the exceptional simple complex Lie algebras by Killing and E Cartan it was natural to look for corresponding groups over finite fields and already around 1900 this was done by Dickson for the exceptional Lie algebras G and E However a deep reason for this 2 6 parallelism was missing and it is only Chevalley who in 1955 and 1961 discovered that to each complex simple Lie algebra corresponds by a uniform process a group scheme
