Eddies In Marine Science:

Eddies in Marine Science A. R. Robinson, 2012-12-06 It is now well known that the mid ocean flow is almost everywhere dominated by so called synoptic or meso scale eddies rotating about nearly vertical axes and extending throughout the water column A typical mid ocean horizontal scale is 100 km and a time scale is 100 days these meso scale eddies have swirl speeds of order 10 cm s^{-1} which are usually considerably greater than the long term average flow Many types of eddies with somewhat different scales and characteristics have been identified The existence of such eddies was suspected by navigators more than a century ago and confirmed by the work of C O D Iselin and V B Stockman in the 1930 s Measurements from R/V Arides in 1959 60 using the then newly developed neutrally buoyant floats indicated the main characteristics of the eddies in the deep ocean of the NW Atlantic while a series of Soviet moored current meter arrays culminated in POLYGON 1970 in the explicit mapping of an energetic anticyclonic eddy in the tropical NE Atlantic In 1973 a large collaborative mainly U S U K program MODE I produced synoptic charts for an area of the NW Atlantic and confirmed the existence of an open ocean eddy field and established its characteristics Meso scale eddies are now known to be of interest and importance to marine chemists and biologists as well as to physical oceanographers and meteorologists

Eddies in Marine Science A R Robinson, 1983-09-01 **Practical Handbook of Marine Science** Michael J. Kennish, 2019-07-12 The heavily revised Practical Handbook of Marine Science Fourth Edition continues its tradition as a state of the art reference that updates the field of marine science to meet the interdisciplinary research needs of physical oceanographers marine biologists marine chemists and marine geologists This edition adds an entirely new section devoted to Climate Change and Climate Change Effects It also adds new sections on Estuaries Beaches Barrier Islands Shellfish Macroalgae Food Chains Food Webs Trophic Dynamics System Productivity Physical Chemical Biological Alteration and Coastal Resource Management The Handbook assembles an extensive international collection of marine science data throughout with approximately 1 000 tables and illustrations It provides comprehensive coverage of anthropogenic impacts in estuarine and marine ecosystems from local regional and global perspectives Maintaining its user friendly multi sectional format this comprehensive resource will also be of value to undergraduate and graduate students research scientists administrators and other professionals who deal with the management of marine resources Now published in full color the new edition offers extensive illustrative and tabular reference material covering all the major disciplines related to the sea
