Understanding Education and Economics Jessie Bustillos Morales, Sandra Abegglen, 2020-03-04 *Understanding Education and Economics* explores the multiple ways in which the field of education and schooling has become closely aligned with economic imperatives and interests and the impact of this on learning and teaching. In particular, the increasing influence of economic arguments, economic ideologies, and government involvement in education have made apparent that there is a need to reflect and talk about economic influences and trends in education. Drawing on the expertise of educationalists around the world, the book articulates key debates and theoretical perspectives which can give both students and staff across several courses within the study of education a framework for discussing and analysing how economics defines and shapes the nature and purposes of education. The chapters offer discussions and reflections on key issues including the historical developments that led to the creation of a formal education system in England and Wales, the ways in which neoliberalism underpins education including the coercion of education to serve economic needs, the economics of the university as an institution, addressing philosophical, sociological, historical, psychological, and social issues in education, and encouraging readers to pose questions about the nature of education. This book is a valuable resource for students and staff alike and will allow them to broaden perspectives on what education could be for and what it should be for. **Historians of Economics and Economic Thought** Steven G. Medema, Warren J. Samuels, 2001-08-16 This collection summarizes the work of key historians of economics and attempts to quantify their impact. The collection is authored by an impressive list of contributors, many of whom are themselves well known in this field. *A New Education for a New Economy: From Human Capital to Human Flourishing* Tal Gilead, 2024-06-03 Providing an in-depth, novel analysis of education's role in today's economy by scrutinizing its theoretical underpinnings, this volume critiques the suitability of the current dominant economic framework for education and for shaping educational policymaking worldwide. Critically examining the history and philosophy that underpin our present societal understanding of the link between economics and education, the book argues for an urgent redefining of education's role in the economy based on intellectual foundations that significantly differ from our current dominant conceptions. Across seven chapters, the book posits that the adoption of a new philosophical framework, the reshaping of economic and educational aims, and the adjustment of our educational system are each necessary to better promote human flourishing. Ultimately providing a platform to entirely reconsider the idea that the primary aim of education is to serve the economic system in particular economic growth, this book will appeal to scholars, researchers, and postgraduate students studying educational policy, the philosophy of education, and the history of education more broadly. Education policymakers and academics studying education and the economy may also find this book of interest. Education and
