Faces of the Feminine Brandy B. Stark,2011 Faces in the Brain - a Behavioral, Eye-tracking and High-level Adaptation Approach to Human Face Perception Regine G. M. Armann,2011 Heads, Faces, Types, Races Victor Gabriel Rocine,1910 **In Your Face** David Perrett,2017-09-16 In our daily lives in our memories and fantasies our mental worlds overflow with faces But what do we really know about this most remarkable feature of the human body Why do we have faces at all and brains that are good at reading them What do our looks say and not say about our personalities And perhaps the most compelling question of all Why are we attracted to some faces more than others In Your Face is an engaging and authoritative tour of the science of facial beauty and face perception David Perrett the pre eminent scholar in the field reveals and interprets the most remarkable findings and in the process demolishes many popular myths setting the record straight on what neuroscience and evolutionary psychology are teaching us about beauty The record is more surprising and often more unsettling than you might think **On Our Minds** Eric M. Gander,2004-12-01 There is no question more fundamental to human existence than that posed by the nature versus nurture debate For much of the past century it was widely believed that there was no essential human nature and that people could be educated or socialized to thrive in almost any imaginable culture Today that orthodoxy is being directly and forcefully challenged by a new science of the mind evolutionary psychology Like the theory of evolution itself the implications of evolutionary psychology are provocative and unsettling Rather than viewing the human mind as a mysterious black box or a blank slate evolutionary psychologists see it as a physical organ that has evolved to process certain types of information in certain ways that enables us to thrive only in certain types of cultures In On Our Minds Eric M Gander examines all sides of the public debate between evolutionary psychologists and their critics Paying particularly close attention to the popular science writings of Steven Pinker Edward O Wilson Richard Dawkins and Stephen Jay Gould Gander traces the history of the controversy succinctly summarizes the claims and theories of the evolutionary psychologists dissects the various arguments deployed by each side and considers in detail the far reaching ramifications social cultural and political of this debate Gander s lucid and highly readable account concludes that evolutionary psychology now holds the potential to answer our oldest and most profound moral and philosophical questions fundamentally changing our self perception as a species Interpersonal Encounters Laura K. Variability and Individual Differences in Early Social Perception and Social Cognition Jessica

Sommerville, Alia Martin, Talee Ziv, 2016-06-10 Over the past three decades mounting evidence has suggested that infants' social perceptual and social cognitive abilities are considerably richer than was once thought By the end of the second year of life infants discriminate faces along various social dimensions attend to and understand others' goals and intentions use the emotions of others to guide their learning and behavior attribute dispositional characteristics to other agents and make basic social evaluations What has also become clear is that there is a great deal of variability in infants' social perception and cognition A critical outstanding question concerns the nature and meaning of such variability The proposed Research Topic welcomes papers addressing cutting edge questions regarding variability and individual differences in early social perception and social cognition The goal of these papers is to investigate overarching questions in this domain which are necessary to move the field forward Variability in early social perception and social cognition among other domains in infancy and early childhood is often attributed to noise or overlooked in favor of focusing on age related changes Yet recent work suggests that variability in social perceptual and social cognitive tasks reliably inter relates and predicts real world social behaviors For example infants' everyday experience with different face categories predicts individual differences in face processing infants' production of goal directed actions predicts their simultaneous understanding of these actions and variability in social attention during the second year of life is related to theory of mind during the preschool years These findings suggest that variability in performance on social perception and social cognition tasks is not merely a nuisance variable but rather may provide the key to addressing significant questions regarding the nature of infants' social perception and social cognition and the processes that underlie developmental change Acknowledging and closely examining and investigating variability in early

social perceptual and social cognitive abilities may represent a powerful approach for understanding development in at least two ways First variability can signal transitional points in the developmental onset of a given ability Thus such variability and the extent to which variability relates to experience and or other abilities can be used to test hypotheses regarding mechanisms that underlie developmental changes Second variability can represent more enduring individual differences between infants In this case critical questions arise regarding the source of individual differences that is what factors shape the emergence of individual differences and whether such early individual differences contribute to the development of more advanced and sophisticated forms of social cognition and behavior The goal of this Research Topic will be to encourage researchers to take variability in early social perception and cognition seriously Papers that give variability center stage and are aimed at addressing the value of variability for identifying developmental mechanisms as well as investigating the existence source and antecedents of early individual differences in social perception and social cognition are welcomed Taken together the contributed papers will provide integral new information to the study of social perception and social cognition over the first three years of life

The Biology of Beauty Rachelle M. Smith, 2018-06-08 This thought provoking book examines the science behind human attractiveness the ratios proportions and other factors that to a large extent dictate what we find beautiful It is said that beauty is in the eye of the beholder but recent scientific research suggests that human attractiveness is much more objective than we once thought deeply rooted in our biology and evolutionary history For instance facial symmetry is considered extremely attractive because it indicates good health and nutrition during the formative developmental years This book explores these insights Part I of The Biology of Beauty The Science behind Human Attractiveness takes a closer look at what traits we find the most alluring and why It discusses why attractiveness is important from an evolutionary standpoint and the advantages and disadvantages of being attractive In addition to exploring these beauty universals it examines how beauty ideals can be shaped by factors such as culture religion and the media Part II provides an in depth analysis of individual features that contribute to attractiveness offering scientific explanations for our preferences The book also includes a collection of insightful sidebars that highlight beauty ideals in different parts of the world and at other times in history

Hormones and Person Perception Lisa L. M. Welling, 2025-08-11 Researchers have increasingly acknowledged the influence of biology in person perception and considerably more research has been published on this topic in humans over the last three decades Evidence suggests that how we perceive others is not only influenced by our environment but by chemical messengers found within the body including endogenous i e natural and exogenous i e synthetic hormones Yet the putative relationship between hormones and human behavior remains both controversial and disputed and the methods across studies have been inconsistent For example several studies have demonstrated increases in women's preferences for men's traits including masculine face and body shape masculine vocal characteristics facial symmetry greater height and the odor of dominant symmetrical and genetically compatible men but the methods across

these studies vary considerably and the results do not always replicate
