Cleft Lip and Palate Diego F. Wyszynski, 2002 Major advances in the diagnosis and treatment of oral clefts have been made in the past 50 years and recent genetics and epidemiological studies have led to new theories about the causes of cleft lip and palate. Addressing issues that are relevant to clinicians, researchers, and family members, this book is a comprehensive, well-illustrated, and up-to-date account of the many facets of this common disorder. The authors describe the embryological and molecular mechanisms of cleft causation, present and illustrate the genetic and epidemiological methods used to identify risk factors for oral clefts, and describe treatments by the various professionals of the cleft team. A section is also devoted to the integration of research findings into public health practice, including ethical and financial considerations. The book draws together such diverse disciplines as craniofacial development, gene mapping, epidemiology, medicine, ethics, health economics, and health policy and management, and it will be an invaluable reference work.

Designed for students, clinicians new to this population, and any member of a cleft palate team, this book emphasizes what practicing clinicians need to know in the workplace. Current research and best practices are summarized for readers. From basic information on anatomy, physiology, and embryology of the face and oral cavity to oral dental and ENT anomalies and their effects on speech, resonance, and feeding, this book includes information on common craniofacial anomalies, associated anomalies, and genetic syndromes. The evaluation section includes the perceptual evaluation of speech and resonance, the intraoral examination, and instrumental assessment procedures. The treatment section includes surgical procedures, prosthetic devices, and therapies designed to address speech, resonance, and velopharyngeal dysfunction. The need for multidisciplinary team assessment and treatment is emphasized throughout, with contributions from members of a working cleft palate team.
