environmental groups and businesses and are applied to producers through supply chain contracts without any government involvement The reluctance to eat tuna fish or own elephant ivory reflects more general social norms disseminated through education and culture How and why do these norms arise In what ways do they affect behavior Do they change what states and individuals actually do and if so why How effective are they in solving international environmental problems In the second edition of *The Art and Craft of International Environmental Law* Daniel Bodansky and Harro van Asselt explore these and other questions Revisions cover the numerous developments spanning the 13 years since the first edition was published New chapters address the growing role of environmental NGOs and the increasingly complex architecture of environmental law involving multiple institutions levels of governance and actors Recent research has been incorporated on treaty design and policy implementation and effectiveness and greater attention has been given to the role of the judiciary in standard setting implementation and enforcement A sophisticated yet highly readable introduction to how international environmental law works and sometimes doesn't work this book is essential reading for a wide audience
