Editorial introduction

Vasile Staicu

In the late seventies, for various reasons often mixed with politics, several Romanian scientists, and mathematicians in particular, defected to Western Europe, the USA, or Canada, hoping to continue their research there in freedom and at the highest level.

Prof. Corduneanu had the beautiful idea to create a new mathematics journal, in which mathematicians of Romanian descent were invited to publish their research papers. Moreover, the newly created journal featured in every issue an updated list of mathematicians and computer scientists of Romanian extraction residing outside Romania, in addition to reviews of recent mathematics publications and notices concerning the ever increasing community of Romanian mathematicians from abroad.

The journal, appropriately named **Libertas Mathematica**, has been published at the University of Texas at Arlington by the *American Romanian Academy of Arts and Sciences* (ARA). ARA is an internationally recognized *academic* research and educational institution, founded in California by a group of American–Romanians.

The first issue was published in the summer of 1981, and Prof. Corduneanu found the strength and resources to issue the journal ever since. This enterprise helped many mathematicians of the Romanian diaspora to better integrate into the global mathematical community. I wish to express my deep gratitude to Prof. Corduneanu for his work in this direction.

Answering Prof. Corduneanu's call to relaunch Libertas Mathematica in a broader international context, I am pleased to introduce **Libertas Mathematica (new series)**, a mathematics journal that aims to provide a forum for the publication of research papers of pure and applied mathematics, and a dissemination medium for new ideas and developments that originate in, or are of interest to the world's mathematical community.

Although times have changed, we decided to keep the name Libertas Mathematica for the journal. This is because, first of all, we want to preserve the community of mathematicians who during the past thirty-one years have been interested in the journal, either as contributors of research papers or simply as readers. Secondly, because the old beautiful title alludes to political freedom, which is always threatened somewhere in the world, and also to the boundless freedom of mathematical thinking.

Mathematics in Ancient Egypt Annette Imhausen,2020-10-13 A survey of ancient Egyptian mathematics across three thousand years Mathematics in Ancient Egypt traces the development of Egyptian mathematics from the end of the fourth millennium BC and the earliest hints of writing and number notation to the end of the pharaonic period in Greco Roman times Drawing from mathematical texts architectural drawings administrative documents and other sources Annette Imhausen surveys three thousand years of Egyptian history to present an integrated picture of theoretical mathematics in relation to the daily practices of Egyptian life and social structures Imhausen shows that from the earliest beginnings pharaonic civilization used numerical techniques to efficiently control and use their material resources and labor Even during the Old Kingdom a variety of metrological systems had already been devised By the Middle Kingdom procedures had been

established to teach mathematical techniques to scribes in order to make them proficient administrators for their king Imhausen looks at counterparts to the notation of zero suggests an explanation for the evolution of unit fractions and analyzes concepts of arithmetic techniques She draws connections and comparisons to Mesopotamian mathematics examines which individuals in Egyptian society held mathematical knowledge and considers which scribes were trained in mathematical ideas and why Of interest to historians of mathematics mathematicians Egyptologists and all those curious about Egyptian culture Mathematics in Ancient Egypt sheds new light on a civilization s unique mathematical evolution
