## **Edible Oil Processing:**

*Edible Oil Processing* Wolf Hamm, Richard J. Hamilton, Gijs Calliauw, 2013-05-28 Oils and fats are almost ubiquitous in food processing whether naturally occurring in foods or added as ingredients that bring functional benefits. Whilst levels of fat intake must be controlled in order to avoid obesity and other health problems, it remains the fact that fats along with proteins and carbohydrates are one of the three macronutrients and therefore an essential part of a healthy diet. The ability to process oils and fats to make them acceptable as part of our food supplies is a key component in our overall knowledge of them. Without this ability, the food that we consume would be totally different and much of the flexibility available to us as a result of the application of processing techniques would be lost. Obviously, we need to know how to process fatty oils, but we also need to know how best to use them once they have been processed. This second edition of *Edible Oil Processing* presents a valuable overview of the technology and applications behind the subject. It covers the latest technologies which address new environmental and nutritional requirements as well as the current state of world edible oil markets. This book is intended for food scientists and technologists who use oils and fats in food formulations as well as chemists and technologists working in edible oils and fats processing.

Brian Dunford, 2004-04-30 This book provides a summary of research to help in the attainment of higher yields of beneficial compounds naturally present in edible fats and oils that can be obtained through new refining techniques or modifications of conventional methods, potentially leading to use of these products for disease prevention and treatment. It also provides a summary of research on modifications of natural lipids. The major emphasis is on vegetable sources of oils. Oil and oilseed processing is very complex, involving a number of unit operations. Readers will find this book helpful in learning about the fundamental concepts and practical information on oil and oilseed processing and their relevance to human nutrition and health.

*Green Vegetable Oil Processing* Walter E. Farr, Andrew Proctor, 2013-12-04 Alternative green food processing technologies have gained much technical and industrial attention in recent years as a potential means of reducing costs and promoting consumer awareness of corporate environmental responsibility. However, utilizing green principles is now becoming an effective business approach to enhance vegetable oil processing profitability.

Two years have passed since the first edition of Green Vegetable Oil Processing was published The Revised First Edition includes much of the content of the first edition but incorporates updated data details images figures and captions This book addresses alternative green technologies at various stages of oilseed and vegetable oil processing This includes oil extraction technologies such as expeller aqueous and supercritical methods and green modifications of conventional unit operations such as degumming refining bleaching hydrogenation winterizing dewaxing fractionation and deodorization While most chapters describe soy oil processing the techniques described equally applicable to oils and fats in general Documents the current state of green oil processing technologies available today Addresses alternative green technologies at various stages of oilseed processing Includes technologies already in commercial use and some that are still in developmental stages
