Edmond Halley And His Comet:

Edmond Halley and His Comet Louis Baldwin, 1985 Edmond Halley Alan H. Cook, 1998 Edmond Halley 1656 1742 MA LLD FRS Capt RN Savilian Professor of Geometry and Astronomer Royal stands pre eminent among Oxford English and European scientists A contemporary of Wren Pepys Hooke Handel Purcell and Dryden he was a schoolboy in London while the Great Fire raged and was an active participant in the Enlightenment an age of profound developments in all the arts and sciences As a younger contemporary of Isaac Newton he had a crucial part in the Newtonian revolution in the natural sciences It was Halley who set the question that led Newton to write the Principia and who edited paid for and reviewed it In later years he applied the methods of the Principia widely in astronomy and geophysics Now more widely known for his prediction of the return of his comet Halley discovered the proper motion of stars made important studies of the moon's motion and his investigations of the Earth's magnetic field and of tides were unrivalled for centuries His prediction of the transit of Venus led to Cook's voyage to Tahiti He was far more than an cloistered academic his exploits as a naval captain led to perilous adventures and he was also a notable servant of the State Much material about his eventful career has come to light in recent years making this a timely new account of the life scientific interests and continuing influence of this engaging and adventurous scholar Sir Alan Cook has written a fascinating and illuminating account of Halley's life and science making this a unique and highly readable biography of one of the key figures of his time **Edmond Halley, the Man and His Comet** Barbara Hooper Heckart, 1984 Presents the life of the seventeenth century scientist who made predictions about the comet which bears his name and discusses many other important scientific contributions he made **Edmond Halley** David Carl Ipsen, 2004-11 Describes information about Edmond Halley and his other contributions to science and the world

Correspondence and Papers of Edmond Halley Edmond Halley, 1932 The Greatest Comets in History David A.J. Seargent, 2008-12-16 Naked eye comets are far from uncommon As a rough average one appears every 18 months or thereabouts and it is not very unusual to see more than two in a single year The record so far seems to have been 2004 with a total of five comets visible without optical aid But 2006 1970 and 1911 were not far behind with a total of four apiece Yet the majority of these pass unnoticed by the general public Most simply look like fuzzy stars with tails that are either faint or below the naked eye threshold The classical comet a bright star like object with a long flowing tail is a sight that graces our skies about once per decade on average These great comets are surely among the most beautiful objects that we can see in the heavens and it is no wonder that they created such fear in earlier times Just what makes a comet great is not easy to define It is neither just about brightness nor only a matter of size Some comets can sport prodigiously long tails and yet not be regarded as great Others can become very bright but hardly anyone other than a handful of enthusiastic astronomers will ever see them Much depends on their separation from the Sun the intensity of the tail and so forth **Edmond Halley: More Than A Man with A Comet** D. C. Ipsen, 2004-11 Today Edmond Halley is known as the scientist whose comet returns

every 75 years or so But he was a man of many talents who did much more than make a prediction about a comet that happen to appear during his time Probably Halley s biggest impact on history was from an idea for finding the distance to the sun After viewing a transit of Mercury across the sun s face during a starmapping trip to the southern hemisphere Halley hit on the idea of timing a transit of Venus in different parts of the world as a way of discovering the distance to the sun Halley s scheme would eventually send Captain James Cook on his first voyage into the South Pacific aboard Endeavour years after Halley s death Halley himself made several scientific trips to southern waters His aim was to investigate the earth s magnetic field but he was also charged with attempting to discover new lands in the South Atlantic Beyond a scrap of land many miles off the coast of Brazil he found nothing new in the way of land But measurements of the earth s magnetism gave support for his ingenious theory of how the earth is put together Adventurer Halley also gained fame as an early underwater explorer He developed a diving bell and a diving helmet and used them under the waters of the English Channel intending eventually to hunt for sunken treasure Halley was surely the 17th century s most active promoter of science serving for years as editor for publications of the influential Royal Society He is acclaimed for encouraging the reluctant Isaac Newton to publish his ideas about motion and gravity Altogether Halley gave the world much more than a name for a speedy comet

Astronomers and Cosmologists Dean Miller,2014-01-01 In this book a breakdown of the life and work of some of history s pioneers in the study of astronomy and cosmology are thoroughly explored This volume provides excellent biographical sketches for trailblazers in the sciences Articles are devoted to specific scientists covering the contributions to their field specifically addressing how their research discoveries and inventions impacted human understanding and experience This historical review includes scientists from around the world and throughout the centuries with a chapter specifically devoted to the top scientific contributors of the 21st century

The 17th and 18th Centuries Frank N. Magill,2013-09-13 Each volume of the Dictionary of World Biography contains 250 entries on the lives of the individuals who shaped their times and left their mark on world history This is not a who s who Instead each entry provides an in depth essay on the life and career of the individual concerned Essays commence with a quick reference section that provides basic facts on the individual s life and achievements The extended biography places the life and works of the individual within an historical context and the summary at the end of each essay provides a synopsis of the individual s place in history All entries conclude with a fully annotated bibliography

Edmond Halley David K. Love,2023-11-15 Edmond Halley is known far and wide thanks largely to the comet bearing his name the return of which he predicted in 1705 While that discovery would be enough to make the career of any scientist Halley s massive contributions to the fields of astronomy navigation geophysics mathematics engineering and actuarial science as a young man and eventually as Astronomer Royal are mostly overlooked Edmond Halley The Many Discoveries of the Most Curious Astronomer Royal is a revelatory and deeply researched biography of a man whose defining achievement isn t even the half of it A jack of all trades when it came to scientific reasoning an all around

academic and workaholic who couldn't leave well enough alone Halley was amazingly productive and prolific He was behind some of the most groundbreaking discoveries in human history It was Halley who was the first to accurately plot the stars of the southern hemisphere He published Isaac Newton's Principia arguably the most important scientific text ever written translated the works of ancient Greek mathematician Apollonius captained the ship Paramore on a scientific expedition to plot the Earth's magnetic fields was the first to calculate mortality annuities creating the foundation for actuarial science made improvements to the diving bell surveyed the tides of the English Channel and began the movement to accurately measure the distance between the Earth and Sun unlocking the key to determining the distances to the nearest stars In this incisive and perceptive biography author David K Love reveals the boundless mind and endless curiosity of Edmond Halley firmly cementing the legacy of the second Astronomer Royal among the first rate scientists of his time Asteroids, Meteors, and Comets Josepha Sherman, 2010-01-30 With its age appropriate text helpful charts colorful design and vivid illustrations and photography this series is perfect for students working on reports and projects or for the budding astronomer fascinated by what exists beyond our planet *Absolutism and the Scientific Revolution, 1600-1720* Christopher Baker, 2002-09-30 This book the sixth volume in The Great Cultural Eras of the Western World series provides information on more than 400 individuals who created and played a role in the era's intellectual and cultural activity The book's focus is on cultural figures those whose inventions and discoveries contributed to the scientific revolution those whose line of reasoning contributed to secularism groundbreaking artists like Rembrandt lesser known painters and contributors to art and music As the momentum of the Renaissance peaked in 1600 the Western World was poised to move from the Early Modern to the Modern Era The Thirty Years War ended in 1648 and religion was no longer a cause for military conflict Europe grew more secularized Organized scientific research led to groundbreaking discoveries such as the earth's magnetic field Kepler's first two laws of motion and the slide rule In the arts Baroque painting music and literature evolved A new Europe was emerging This book is a useful basic reference for students and laymen with entries specifically designed for ready reference

Halley's Quest Julie Wakefield, 2005-10-20 For most people Edmond Halley is best known for accurately predicting the periodic appearance of the comet that ultimately would bear his name But his greatest achievement may have been overlooked indeed few people know that it was Halley who solved the riddle of accurate navigation for all sea going vessels As seventeenth century scientists gradually came to believe that the inside of the Earth was magnetized they were puzzled by the fact magnetic north not only varied slightly from place to place but gradually changed over time suggesting a slow variation of the Earth's magnetic field But if the Earth was permanently magnetized how could its magnetism vary Edmond Halley Britain's Astronomer Royal ingeniously proposed that the Earth contained a number of spherical shells one inside the other each magnetized differently each slowly rotating in relation to the others This brilliant deduction earned Halley the command of a small sailing ship the 52 foot Paramore and with it a royal mandate Halley was to sail forth to stand so far into

the South till you discover the Coast of the Terra Incognita But more importantly determine the variation between true and magnetic north in order to more accurately calculate longitude a feat that would improve Britain's navigational skills and ensure its dominance of the high seas Halley's Quest takes readers on a trilogy of sea voyages each of which proved to be as novel and revealing as it was difficult and controversial But more than a yarn of risk and adventure the story at the core of the book is a deeply personal and intellectual tale that captures the science and the spirit of an almost forgotten episode in the history of navigation Once branded a heretic by the Church and denied a prestigious scholarly chair at Oxford University Halley ultimately changed the course of science producing charts that described more accurate ways to navigate and documenting new geophysical phenomena ranging from ocean patterns to the motion of Jupiter's moons This delightful book emphasizes the drama of Halley's mission and the passion of an era hungry for the stories science had to tell **Celestial**

Mechanics Alessandra Celletti, Ettore Perozzi, 2007-06-24 I was delighted to be invited by my colleagues Alessandra Celletti and Ettore Perozzi to provide a foreword to their book Celestial Mechanics The Waltz of the Planets Having known them for many years and long admired their work in the subject so many of us love and are fascinated by I read with great attention and pleasure the text when it arrived It is a formidable task they have set themselves to provide a book that describes attempts by successive generations of astronomers from the dawn of history five millennia ago to observe record and understand the phenomena of the heavens particularly the intricate and perplexing behaviour of the planets Sun and Moon As naked eye astronomy became aided by the telescope and the photographic plate and since the middle of the twentieth century by instruments launched on spacecraft into circum Earth orbit or to the Moon and planets and beyond the discovery of new satellites scores of them and ring systems displaying new and initially perplexing behaviour also demanded explanations for that behaviour It is also the inspiring story of science itself with special reference to how lonely individuals impelled by curiosity and dedicated to seeking the truth and nothing but the truth about the fascinating phenomena of nature ultimately became accepted as scientists those players in the most successful endeavour ever engaged in by the human race

Come Rain or Shine Storm Dunlop, 2015-07-13 In Faversham Kent in 2003 the highest ever temperature in the UK was recorded a blistering 38.5 C 101.3 F The word blirly in Scotland describes gusts of wind and rain The weather is a subject that the British simply cannot leave alone and for good reason it's likely that for more than half the year they will experience at least three seasons in one day so there's always plenty to talk about This charming miscellany as wide ranging and unpredictable as the weather itself is filled with curious historical facts amazing statistics and fascinating anecdotes that will keep you entertained come rain or shine **The Quest for Comets** David H. Levy, 2013-11-11 The brilliant trailing beauty of fiery comets has inspired fear wonder and awe since the dawn of human history Brighter than stars moving and

disappearing in their own singular orbits comets have been among the most mysterious elements in the sky eluding our understanding until very recently With the aid of space probes scientists have discovered that these swiftly moving chunks of ice and carbon are more plentiful and far more dangerous than suspected Scientists are also beginning to realize the monumental role played by comets in the development of the Earth and solar system David Levy describes in dramatic detail the thrilling yet often devastating effects of comet collisions In the dawn of our solar system the Earth was barraged with comets that may have carried the materials necessary to lay the foundations for life on this planet Levy also presents compelling evidence for later comet collisions including those of the age of dinosaurs Great impacts Levy asserts not only caused the extinction of the dinosaurs but ushered in new species of life As Levy so clearly explains scientists are realizing that comet collisions are virtually inevitable Levy reveals possible future collisions with the Earth and describes the terrible risks to life they would pose He even shows how we might prepare to withstand the impact of large comets in the future

The Observing Guide to the Messier Marathon Don Machholz, 2002-10-10 The Messier Catalogue is a list of one hundred and ten galaxies star clusters and nebulae and includes many of the brightest and best known objects in the sky Amateur astronomers who find all the objects on the list in one night have successfully completed the Messier Marathon The Observing Guide to the Messier Marathon contains over 90 easy to use star maps to guide the observer from one object to the next and provides tips for a successful night of observing Don Machholz also tells the story of the eighteenth century astronomer Charles Messier and how he came to compile his extensive catalogue His complete guide to the Messier Marathon will help the amateur astronomer to observe the Messier Objects throughout the year using a small telescope or even a pair of binoculars Don Machholz is an engineer in Auburn California Interested in astronomy since childhood he is a renowned comet hunter having discovered nine comets that bear his name He writes articles for local California newspapers and radio stations for special astronomical events Between 1988 and 2000 Don Machholz was the Comets Recorder for the Association of Lunar and Planetary Recorders

Apocalypse Soon? Stephen Francis Haller, 2002 Using the doomsday scenarios of global warming nuclear winter and ozone depletion as examples Haller contemporary studies Wilfrid Laurier U Canada explores how one should judge the criteria for evaluating possibilities of catastrophe His central concern is finding the most rational approach to such possibilities when there is no reliable estimate of the likelihood of catastrophe He suggests that even if one rejects epistemological and ethical arguments regarding possible disasters one should be convinced by Pascalian arguments suggesting a precautionary principle even in the absence of reliable evidence Annotation copyrighted by Book News Inc Portland OR
