Joint Fact-Finding in Urban Planning and Environmental Disputes Masahiro Matsuura, Todd Schenk, 2016-10-04 The days of rationalist scientific management and deference to official data are behind us The credibility of experts and the information they provide are regularly challenged officials are routinely provided with conflicting sets of facts as they plan and make decisions and decision makers and stakeholders alike are largely skeptical that technical information will adequately account for the various interests and concerns and lead to the right outcomes They struggle to reconcile technical information with other forms of knowledge and differing interests priorities and perspectives Issues like climate change are complicating matters even further as scientists and technicians must increasingly acknowledge the uncertainty and potential fallibility of their findings and highlight the dynamic nature of the systems they are explaining This book examines how groups looking to plan and make decisions in any number of areas can wade through the imperfect and often contradictory information they have to make fair efficient wise and well informed choices It introduces an emerging and very promising approach called joint fact finding JFF Rather than each stakeholder group marshaling the set of facts that best advance their respective interests and perspectives while discrediting the contradictory facts others provide groups are challenged to collaboratively generate shared sets of facts that all parties accept This book introduces readers to the theory of JFF the value it can provide and how they can adopt this approach in practice It brings together writings from leading practitioners and scholars from around the world that are at the forefront of the JFF approach to science intensive policymaking urban planning and environmental dispute resolution The first set of chapters outlines the concept of JFF and situates it within other bodies of theory and practice The second set of case based chapters elucidates how JFF is being applied in practice This book delivers a new perspective to scholars in the field of public policy urban planning environmental studies and science and technology studies as well as public officials technical experts policy consultants and professional facilitators

Accelerating Democracy John O. McGinnis, 2013 How to adapt democracy to the accelerating pace of technological change and why it is critical that we do Successful democracies throughout history from ancient Athens to Britain on the cusp of the industrial age have used the technology of their time to gather information for better governance Our challenge is no different today but it is more urgent because the accelerating pace of technological change creates potentially enormous dangers as well as benefits *Accelerating Democracy* shows how to adapt democracy to new information technologies that can enhance political decision making and enable us to navigate the social rapids ahead John O McGinnis demonstrates how these new technologies combine to address a problem as old as democracy itself how to help citizens better evaluate the consequences of their political choices As society became more complex in the nineteenth century social planning became a top down enterprise delegated to experts and bureaucrats Today technology increasingly permits

information to bubble up from below and filter through more dispersed and competitive sources McGinnis explains how to use fast evolving information technologies to more effectively analyze past public policy bring unprecedented intensity of scrutiny to current policy proposals and more accurately predict the results of future policy But he argues that we can do so only if government keeps pace with technological change For instance it must revive federalism to permit different jurisdictions to test different policies so that their results can be evaluated and it must legalize information markets to permit people to bet on what the consequences of a policy will be even before that policy is implemented Accelerating Democracy reveals how we can achieve a democracy that is informed by expertise and social scientific knowledge while shedding the arrogance and insularity of a technocracy

Science Without Boundaries Willy Ostreng, 2010 Science without Boundaries discusses the many issues involved in going beyond disciplinary research practices in science politics and society and addresses the complexities of their interface Governments and politicians are increasingly calling upon the scientific community to deal with global challenges such as climate change poverty international governance peace making et cetera These are calls for interdisciplinary research calls to deal with the interaction of parts in complex systems The book addresses questions like these Does interdisciplinary research fit into the overall disciplinary organization of the sciences Does interdisciplinary research meet the high scientific standards of the research community How does the science community adopt to changing circumstances How responsive is the science community to social and political needs To what extent do governments intervene to influence science What pattern of interaction exists between politics society and research Polar research is used to show how politics may intermingle with science to safeguard national interests in times of dramatic international change

The Transformation of Human Rights Fact-finding Philip Alston, Sarah Knuckey, 2016 Fact finding is at the heart of human rights advocacy and is often at the center of international controversies about alleged government abuses In recent years human rights fact finding has greatly proliferated and become more sophisticated and complex while also being subjected to stronger scrutiny from governments Nevertheless despite the prominence of fact finding it remains strikingly under studied and under theorized Too little has been done to bring forth the assumptions methodologies and techniques of this rapidly developing field or to open human rights fact finding to critical and constructive scrutiny The Transformation of Human Rights Fact Finding offers a multidisciplinary approach to the study of fact finding with rigorous and critical analysis of the field of practice while providing a range of accounts of what actually happens It deepens the study and practice of human rights investigations and fosters fact finding as a discretely studied topic while mapping crucial transformations in the field The contributions to this book are the result of a major international conference organized by New York University Law School s Center for Human Rights and Global Justice Engaging the expertise and experience of the editors and contributing authors it offers a broad approach encompassing contemporary issues and analysis across the human rights spectrum in law international relations and critical theory This book addresses the major

areas of human rights fact finding such as victim and witness issues fact finding for advocacy enforcement and litigation the role of interdisciplinary expertise and methodologies crowd sourcing social media and big data and international guidelines for fact finding *Travel Writing and the Natural World, 1768-1840* P. Smethurst, 2012-10-10 Taking as a starting point the parallel occurrence of Cook's Pacific voyages the development of natural history scenic tourism in Britain and romantic travel in Europe this book argues that the effect of these practices was the production of nature as an abstract space and that the genre of travel writing had a central role in reproducing it Signs of Science Dale J. Pratt, 2001 Signs of Science Literature Science and Spanish Modernity since 1868 traces how Spanish culture represented scientific activity from the mid nineteenth century onward The book combines the global perspective afforded by historical narrative with detailed rhetorical analyses of images of science in specific literary and scientific texts As literary criticism it seeks to illuminate similarities and differences in how science and scientists are pictured as cultural history it follows the course of a centuries long dialogue about Spain and science *Fact-Finding before the International Court of Justice* James Gerard Devaney, 2016-09-29 A comprehensive study of the topical issue of fact finding which makes realistic proposals to address the ICJ's problematic practice in this area A History of Forensic Science Alison Adam, 2015-11-19 How and when did forensic science originate in the UK This question demands our attention because our understanding of present day forensic science is vastly enriched through gaining an appreciation of what went before A History of Forensic Science is the first book to consider the wide spectrum of influences which went into creating the discipline in Britain in the first part of the twentieth century This book offers a history of the development of forensic sciences centred on the UK but with consideration of continental and colonial influences from around 1880 to approximately 1940 This period was central to the formation of a separate discipline of forensic science with a distinct professional identity and this book charts the strategies of the new forensic scientists to gain an authoritative voice in the courtroom and to forge a professional identity in the space between forensic medicine scientific policing and independent expert witnessing In so doing it improves our understanding of how forensic science developed as it did This book is essential reading for academics and students engaged in the study of criminology the history of forensic science science and technology studies and the history of policing *Algebraic Art* Andrea K. Henderson, 2018-04-05 Algebraic Art explores the invention of a peculiarly Victorian account of the nature and value of aesthetic form and it traces that account to a surprising source mathematics The nineteenth century was a moment of extraordinary mathematical innovation witnessing the development of non Euclidean geometry the revaluation of symbolic algebra and the importation of mathematical language into philosophy All these innovations sprang from a reconception of mathematics as a formal rather than a referential practice as a means for describing relationships rather than quantities For Victorian mathematicians the value of a claim lay not in its capacity to describe the world but its internal coherence This concern with formal structure produced a striking convergence between mathematics and aesthetics geometers wrote fables logicians reconceived

symbolism and physicists described reality as consisting of beautiful patterns Artists meanwhile drawing upon the cultural prestige of mathematics conceived their work as a science of form whether as lines in a painting twinned characters in a novel or wavelike stress patterns in a poem Avant garde photographs and paintings fantastical novels like Flatland and Lewis Carroll s children s books and experimental poetry by Swinburne Rossetti and Patmore created worlds governed by a rigorous internal logic even as they were pointedly unconcerned with reference or realist protocols Algebraic Art shows that works we tend to regard as outliers to mainstream Victorian culture were expressions of a mathematical formalism that was central to Victorian knowledge production and that continues to shape our understanding of the significance of form

Statistics in the Law of Evidence Nicholas Lennings,2024-11-14 This book evaluates the role played by statistical evidence in litigation Despite the increasing prevalence of statistical evidence in modern litigation how such evidence should be admitted and used by courts is often inconsistent and widely criticised Accepting that statistical evidence can lead to more accurate decisions the book proposes criteria that could allow courts to decide that statistical evidence is good for fact finding The many and varied scholarly debates regarding statistical evidence have by and large avoided judicial attention Unlike previous works this book contextualises those debates in the language and practice of evidence law focusing principally on Australia as well as the UK and the USA It does so by identifying that the controversy around statistical evidence follows the three tiered statistical syllogism underlying statistical inference first whether statistical evidence is capable of establishing an association between phenomena in a state of nature second inferring that phenomena to an individual from the general association and third whether statistical evidence can be sufficient for proof of contested facts Objections are said to arise at each level of this syllogism and by mapping these objections onto evidence law the book argues that a pathway for the judicial evaluation of statistical evidence can be constructed Living Earth Suzanne Garbe,2019-05-01 Illustrated instructions guide readers through Earth Science experiments focusing on plant and animal life including photosynthesis bacteria minerals and fossils An engaging way to support the Next Generation Science Standards Experiments are simple accessible and something that could be used at a science fair in the classroom or at home Exploring life on Earth has never been simpler *Guinness World Records 2015* Guinness World Records,2014-09-16 With a fresh new design and feel inspired by innovations in tablet technology the latest GUINNESS WORLD RECORDS book presents thousands of new and updated records along with hundreds of amazing never before seen photographs The 2015 edition showcases the very best of the most recent world records with new subjects as diverse as castles 3D printing the search for alien life and the latest developments in AI and robotics Plus the Flashback features offer a look back at the archives to bring you the best of the classic and iconic records from the past 60 years Meanwhile the Gallery spreads present the best GUINNESS WORLD RECORDS photography across themed topics such as giant musical instruments wacky vehicles and animals in action And look out for details of how readers can become record breakers themselves In Defense of Science

Frank R. Spellman, Joan Price-Bayer, 2010-12-16 Today only a few people outside of the scientific community are conversant with the tradition of science and its many breakthroughs. The rest are scientifically illiterate. So say Frank R. Spellman and Joan Price Bayer, authors of *In Defense of Science: Why Scientific Literacy Matters*. This book explains why ordinary citizens need to have an understanding of science, its methods, and its groundbreaking discoveries. The authors introduce the most basic scientific concepts in accessible and straightforward language. Along the way, they debunk several misconceptions of science and scientists and arrive at a view of science as an integral part of society, policy, and everyday life. The book begins with an introduction to science and its basic concepts, including a brief and entertaining history of science and scientific discoveries, before taking on current views of science in society. It surveys the many sources of our ideas of science, including pop culture, classics of literature, news media, and political discourse. Much of the information from these sources tends to mislead, and the only way to guard against such misinformation is to become scientifically literate and promote scientific literacy in society. The book therefore delves into the reasons that so many people do not understand basic scientific principles and do not keep up with scientific breakthroughs, and finishes by examining the current state of science education. It includes many resources for further reading and is presented in an engaging and entertaining way. It offers much food for thought for anyone concerned with science in today's world. Fact-Finding without Facts Nancy A. Combs, 2010-07-30 Fact Finding Without Facts explores international criminal fact finding empirically conceptually and normatively After reviewing thousands of pages of transcripts from various international criminal tribunals the author reveals that international criminal trials are beset by numerous and severe fact finding impediments that substantially impair the tribunals ability to determine who did what to whom These fact finding impediments have heretofore received virtually no publicity let alone scholarly treatment and they are deeply troubling not only because they raise grave concerns about the accuracy of the judgments currently being issued but because they can be expected to similarly impair the next generation of international trials that will be held at the International Criminal Court After setting forth her empirical findings the author considers their conceptual and normative implications The author concludes that international criminal tribunals purport a fact finding competence that they do not possess and as a consequence base their judgments on a less precise more amorphous method of fact finding than they publicly acknowledge
