Life Form:

Life's Form Dennis Des Chene, 2000 *Speaking of Forms of Life* Claudio Campagna, Daniel Guevara, 2023-11-26

Humans pose an unprecedented threat to life in all its great diversity of forms. The human induced extinction rate has been compared to mass extinctions of the past. But this language masks the fact that the crisis is due to voluntary and thus avoidable choices and actions. *Speaking of Forms of Life* shows that at the root of this crisis is the tragic inadequacy of the language predominantly used to represent and address what we are doing, including the language of sustainable development, rights for animals, and the rest of nature, their intrinsic value, and conservation of species as populations. This talk alienates us from the other living things from what they actually are, have, and do, and it perpetuates the harm and loss. Campagna and Guevara compellingly argue on rigorous but accessible grounds that there is an alternative language to guide conservation in confronting the radically urgent ethical issues it faces. This is a language with which we are all familiar, mastered by naturalists from Aristotle to Audubon. It articulates the primary value in life and the standard that must guide how human beings should live as one form of life among countless others. This book is a homecoming for those who practice conservation to, above all else, secure a creature's ability to satisfy the necessities of its form of life. This is an essential book for anyone who cares about conservation and is concerned about the frightening pace of extinctions. The great theme of the book is the importance of the language in which we think and talk about living beings. Daniel Guevara and Claudio Campagna make available for conservationists the ground-breaking work of Philippa Foot and Michael Thompson on natural goodness and on our thought about living beings. They show how it can be brought to bear on the threats that confront conservation and on disputes that may seem irresolvable. I recommend *Speaking of Forms of Life* as strongly as I can. Cora Diamond, William R. Kenan Jr. Professor Emerita of Philosophy, Professor of Law and University Professor, University of Virginia. Our current conservation language is shot through with economic platitudes that don't explain anyone's real motives for conserving biodiversity. Campagna and Guevara's new book lays out a convincing alternative grounding conservation goals in the objective goodness of life's many ways of flourishing. *Speaking of Forms of Life* is inspiring, informative, well-grounded in the relevant philosophy and conservation literatures, but never pedantic. Both activists and thinkers will find much of value in *Speaking of Forms of Life*. Philip Cafaro, Professor of Philosophy, Colorado State University. *Speaking of Forms of Life* helps us confront the fact that language often obscures rather than facilitates our understanding of living things. Our language reflects past misperceptions, current ignorance, and our shockingly limited intellectual ability to comprehend where we are in space and time, and who we are with on this strange planet with its soap bubble coating of life. The language in use has abetted and accelerated the catastrophic course we daily continue to choose. *Speaking of Forms of Life* shows us why and how this must change. It's a crucial revelation that we must heed because our species alone can consider changing course, and our species alone must do so. Carl Safina, MacArthur Fellow, Carl Safina Research Chair for Nature and Humanity, Stony Brook University.

Our biosphere is a miracle Communicating the sense of awe and wonder that it instills in many of us is essential to shift from wanton destruction of our natural world for short term economic profit to health and prosperity for all creatures including us humans Speaking of Forms of Life is the first book that unveils how the way we speak to each other affects the way we value and care for our planet An essential read for everyone who cares about the future of nature and humanity Enric Sala National Geographic Explorer in Residence and Hubbard Medalist

Towards a Theory of Epistemically Significant Perception Nadja El Kassar,2015-09-25 How does perceptual experience make us knowledgeable about the world In this book Nadja El Kassar argues that an informed answer requires a novel theory of perception perceptual experience involves conceptual capacities and consists in a relation between a perceiver and the world Contemporary theories of perception disagree about the role of content and conceptual capacities in perceptual experience In her analysis El Kassar scrutinizes the arguments of conceptualist and relationist theories thereby exposing their limitations for explaining the epistemic role of perceptual experience Against this background she develops her novel theory of epistemically significant perception Her theory improves on current accounts by encompassing both the epistemic role of perceptual experiences and its perceptual character Central claims of her theory receive additional support from work in vision science making this book an original contribution to the philosophy of perception

Folk-taxonomies in Early English Earl R. Anderson,2003 A folk taxonomy is a semantic field that represents the particular way in which a language imposes structure and order upon the myriad impressions of human experience and perception Thus for example the experience of color in modern English is structured around an inventory of twelve basic color terms but languages vary in the number of basic color terms used from thirteen or fourteen terms to as few as two or three Anthropological linguists have been interested in the comparative study of folk taxonomies across contemporary languages and in their studies they have sometimes proposed evolutionary models for the development and elaboration of these taxonomies The evolutionary models have implications for historical linguistics but there have been very few studies of the historical development of a folk taxonomy within a language or within a language family Folk Taxonomies in Early English undertakes this task for English and to some extent for the Germanic and Indo European language families The semantic fields studied are basic color terms seasons of the year geometric shapes the five senses the folk psychology of mind and soul and basic plant and animal life forms Anderson's emphasis is on folk taxonomies in Old and Middle English and also on the implications of semantic analysis for our reading of early English literary texts
