The Meat Question Josh Berson, 2019-10-22 A provocative argument that eating meat is not what made humans human

and that the future is not necessarily carnivorous Humans are eating more meat than ever Despite ubiquitous Sweetgreen franchises and the example set by celebrity vegans demand for meat is projected to grow at twice the rate of demand for plant based foods over the next thirty years Between 1960 and 2010 per capita meat consumption in the developing world more than doubled in China meat consumption grew ninefold It has even been claimed that meat made us human that our disproportionately large human brains evolved because our early human ancestors ate meat In *The Meat Question* Josh Berson argues that not only did meat not make us human but the contemporary increase in demand for meat is driven as much by economic insecurity as by affluence Considering the full sweep of meat s history Berson concludes provocatively that the future is not necessarily carnivorous Berson an anthropologist and historian argues that we have the relationship between biology and capitalism backward We may associate meat eating with wealth but in fact meat eating is a sign of poverty cheap meat hunger killing easy to prepare eaten on the go enables a capitalism defined by inequality To answer the meat question says Berson we need to think about meat eating in a way that goes beyond Paleo diets and PETA protests to address the deeply entwined economic and political lives of humans and animals past present and future
