manufacturing electronic publishing construction health care and disabled and elderly people The Standardized Coordination Task Assessment (SCTA) Oemig, Christoph, 2023-02-06 Today's modern world often affords individuals to form teams to work together towards shared goals and objectives. The need for tools to digitally support collaboration distributed in time and space increased over the past decades significantly with a recent sudden increase due to the Corona pandemic crisis. The research goal in the field of computer supported cooperative work (CSCW) has always been to design systems that facilitate collaboration based on the understanding of groups and social interaction especially on how people coordinate their work. In the real world coordination happens in a seemingly seamless and effortless way. However, the resulting mechanisms translated to digital systems often provide a clumsy and awkward experience as users lack the means for subtle and rich interaction beyond the spoken word. After numerous failures revealing system deficits and a large number of ethnographic studies, researchers identified awareness as the support mechanism for effortless coordination in digital systems. Yet instead of addressing the problem using appropriate methods and tools, researchers found themselves trapped in circular reformulations of concepts and evaluations of prototypes on the basis of disciplinary preferences, ignoring the basic characteristics of the objects of interest. Even worse, the most basic design tensions stemming from a use-inspired perspective have not been resolved, indicating a substantial problem with the evaluation of awareness and coordination support. Effortless coordination cannot be reached without being measured, thus not without an appropriate measurement approach. This thesis introduces an appropriate assessment method for the efforts related to awareness and coordination support in cooperative settings: the STANDARDIZED COORDINATION TASK ASSESSMENT (SCTA). Applying a use-inspired, basic research-driven approach, it creates and leverages an effort-based operationalization of the two constructs derived from literature and especially from a cognitive perspective. A highly automated and scalable framework delivers quantitative results to be used for hypotheses validations that allow a benchmark-based approximation of effortless coordination. At the same time, the method opens the door for a lot more use-inspired basic research to resolve many of the still open design tensions and challenges.

Human-Computer Interaction Julie Jacko, Constantine Stephanidis, 2003-09-01 This is the second volume in the HCI International Conference Proceedings 2003. See following arrangement for details.

Systems, Social, and Internationalization Design Aspects of Human-computer Interaction Michael J. Smith, Gavriel Salvendy, 2001-08-01 Please see Volume I for a full description.

Human-Centered Computing Don Harris, Vincent Duffy, Michael Smith, Constantine Stephanidis, 2019-11-11 The 10th International Conference on Human Computer Interaction (HCI International 2003) is held in Crete, Greece, 22-27 June 2003, jointly with the Symposium on Human Interface Japan 2003, the 5th International Conference on Engineering Psychology and Cognitive Ergonomics, and the 2nd International Conference on Universal Access in Human Computer Interaction. A total of 2986 individuals from industry, academia, research institutes, and governmental agencies from 59 countries submitted their work for presentation, and only those submittals that were judged

to be of high scientific quality were included in the program. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of human-computer interaction including the cognitive, social, ergonomic and health aspects of work with computers. These papers also address major advances in knowledge and effective use of computers in a variety of diversified application areas including offices, financial institutions, manufacturing, electronic publishing, construction, health care, disabled and elderly people etc.

Handbook of Standards and Guidelines in Ergonomics and Human Factors Waldemar Karwowski, 2005-12-16 A comprehensive review of international and national standards and guidelines, this handbook consists of 32 chapters divided into nine sections that cover standardization efforts, anthropometry and working postures, designing manual material handling, human-computer interaction, occupational health and safety, legal protection, military human factor standards.

Sharing Expertise Mark S. Ackerman, Volkmar Pipek, Volker Wulf, 2003 The field of knowledge management focuses on how organizations can most effectively store, manage, retrieve and enlarge their intellectual properties. The repository view of knowledge management emphasizes the gathering, providing and filtering of explicit knowledge. The information in a repository has the advantage of being easily transferable and reusable. But it is not easy to use decontextualized information and users often need access to human experts. This book describes a more recent approach to knowledge management which the authors call expertise sharing. Expertise sharing emphasizes the human aspects, cognitive, social, cultural and organizational of knowledge management in addition to information storage and retrieval. Rather than focusing on the management level of an organization, expertise sharing focuses on the self-organized activities of the organization's members. The book addresses the concerns of both researchers and practitioners, describing current literature and research as well as offering information on implementing systems. It consists of three parts: an introduction to knowledge sharing in large organizations, empirical studies of expertise sharing in different types of settings, and detailed descriptions of computer systems that can route queries, assemble people and work, and augment naturally occurring social networks within organizations.

The Human-Computer Interaction Handbook Andrew Sears, Julie A. Jacko, 2002-09-01 The Human-Computer Interaction Handbook: Fundamentals, Evolving Technologies and Emerging Applications is a comprehensive survey of this fast-paced field that is of interest to all HCI practitioners, educators, consultants and researchers. This includes computer scientists, industrial, electrical and computer engineers, cognitive scientists, etc.

Interview Techniques for UX Practitioners Chauncey Wilson, 2013-11-23 Much of the work of user-centered design practitioners involves some type of interviewing. While interviewing is an important skill, many colleagues have little or no formal training in interviewing methods and often learn on the job with limited feedback on the quality of their interviews. This book teaches readers about the three basic interview methods: structured interviews, semi-structured interviews, and unstructured interviews. The author discusses the various strengths, weaknesses, issues with each type of interview and includes best practices and procedures for

conducting effective and efficient interviews The book dives into the detailed information about interviews that haven't been discussed before readers learn how and when to ask the how and why questions to get a deeper understanding of problems concepts and processes as well as discussions on laddering and critical incident techniques Because so much of what UX practitioners do involves good interviewing skills this is your one stop resource with the definitions processes procedures and best practices on the basic approaches
