**Calcium in Muscle Contraction** Johann C. Rüegg, 2012-12-06 Recent years have witnessed an explosion of knowledge leading to a molecular understanding of the mechanisms of action of calcium on excitation and contraction coupling and its role in the regulation of contractility This book highlights the most recent progress as well as providing a historical perspective of the field It presents a concise and comprehensive overview of our current knowledge regarding calcium channels and regulatory proteins as well as intracellular calcium handling and the mechanisms underlying the activation of contractile proteins It also describes how these basic mechanisms have been adapted in various types of muscle especially in cardiac and smooth muscle

*Calcium in Muscle Activation* Johann C. Rüegg, 2012-12-06 This book offers a comparative and interdisciplinary approach to excitation contraction coupling in smooth and striated muscles including the myocardium It is an account of the pathways and mechanisms by which cellular calcium is handled and activates the contractile proteins It also describes how these mechanisms are adapted in various kinds of muscle to meet specific functional requirements such as speed or economy This monograph then presents facts ideas and theories and the evidence on which they are based and if it stimulates others and furthers research it will have served its purpose All of the chapters are self contained and may be read in any order but readers unfamiliar with muscle are recommended to start with the introductory chapter on excitation and contraction During all the years of writing this book I received enormous help from Isolde Berger who corrected edited and transformed my innumerable notes and drafts into a readable manuscript she also compiled the list of references and the Subject Index I owe a great debt of gratitude to her and also to Claudia Zeugner who prepared the figures with expertise and care Then I would like to thank the Deutsche Forschungsgemeinschaft and the Fritz Thyssen Stiftung for supporting the work of my Department which has been reported in this monograph A great many people contributed with helpful discussions

Excitation-Contraction Coupling in Skeletal, Cardiac, and Smooth Muscle George B. Frank, C. Paul Bianchi, Henk Keurs, 2012-12-06 The Third International Symposium on Excitation Contraction Coupling in Skeletal Cardiac and Smooth Muscle organized by George Frank C Paul Bianchi and Henk E DJ ter Keurs was held in Banff Centre Banff Alberta Canada during June 26 to June 30 1991 The theme of these symposia has been to recognize the similarities and dissimilarities of excitation contraction coupling in skeletal cardiac and smooth muscle Cross fertilization of concepts of excitation contraction coupling in these three types of muscle has occurred since the early studies in the late fifties and early sixties on skeletal muscle Investigators in each field meet only at specialized symposia which exclude investigators in the other fields The purpose of the symposia has been to bring together international investigators studying excitation contraction coupling in skeletal cardiac and smooth muscle so that we may learn from each other and hence provide a more global concept of excitation contraction The Third International Symposia has accomplished its objective as we recognize that calcium

channels of the sarcolemma and the sarcoplasmic reticulum play key essential roles in excitation contraction coupling in all three types of muscles In skeletal muscle the recognition that E C coupling consists of two parallel mechanisms one dependent upon a dihydropyridine voltage sensitive sensors coupled to calcium release from the terminal cisternae via the ryanodine sensitive channel in the foot structure of the triad      **Plasticity and Regeneration of the Nervous System**

**Action in Skeletal, Cardiac, and Smooth Muscle** Thomas J.J. Blanck,David M. Wheeler,2012-12-06 The volatile anesthetics continue to be one of the most mysterious yet commonly used class of drugs in medical practice today A prominent and troublesome side effect of volatile anesthetics is their ability to alter hemodynamics This arises from two diverse but interrelated phenomena depression of cardiac contractility and dilation of the vasculature These effects of volatile anesthetics on cardiac and smooth muscle plus the action of volatile anesthetics on skeletal muscle in the malignant hyperthermic syndrome have led to concern about the interaction of volatile anesthetics and other anesthetic agents with calcium metabolism in the muscle cell Many of the phenomena caused by anesthetics appear to have common mechanisms in all of the muscle types however the differences among skeletal cardiac and smooth muscle also lead to distinct effects of the anesthetics in each Given the diverse research disciplines which have been brought to bear on the mechanism of anesthetic alteration of contractility the symposium from which this book originates was convened for the purpose of gathering those with common interests in anesthetic agents and their cellular and subcellular actions in muscle The recent symposium had its origins in a small but exciting meeting that took place at the University of Texas at Houston in 1984 At that time Robert Merin and Jacques Chelly convened a group of people who had interest in cardiac muscle and calcium antagonists

summary of the numerous methods that have evolved or are available for the study of drug and smooth muscle interactions and in particular to highlight their possible uses and limitations Perhaps because of the diversity in content and difficulty of these methods there has to our knowledge never been a previous attempt to bring them together in one place We have not of course succeeded entirely in this objective Environmental Health Perspectives ,1990 **Benign Prostatic**

*Muscle, Matrix, and Bladder Function* Stephen A. Zderic, 2013-11-21 This conference and monograph were the result of many collective efforts The whole concept was formulated one early Wednesday morning at our weekly research meeting at Children's Hospital in our division of urology We have been most fortunate to have a close collaboration with Bob Levin Ed Macarak and Pam Howard who have helped steer the course of our division's growing interest in basic science At our weekly meetings our laboratory fellow will summarize their current work Other ongoing areas of investigation in our labs and elsewhere are discussed We have always made an effort to try and understand what other groups are doing who are working in the area of bladder smooth muscle research It occurred to us that the best way to really know what everyone working in this field was doing would be to sponsor a 2 day meeting where we could all gather to discuss our ongoing work A major limitation of the annual meeting of the American Urologic Association or the urology section of the American Academy of Pediatrics is that the scientific sessions are limited as these are meant to be primarily clinical meetings as they should be For this reason the idea of a meeting devoted solely to research about the urinary bladder had great appeal In addition to allowing for longer presentations than the standard 5 to 7 minutes every effort would be made to encourage a dialogue amongst the presenters and the audience
