Inquizitive Social Science Fluent Level Brenda Parkes, 2002-04-01 **Miracle of Effort** John A. Fortunato Ph. D., 2023-06-12

Miracle of Effort Thalia's Autism Journey is the story of Thalia being diagnosed with autism spectrum disorder when she was two years old and her journey to graduating college and becoming an elementary school teacher. Through Thalia's journey, this book aspires to offer a sense of what children with autism and their families go through. The book takes the reader through the experiences, the emotions, the challenges, the sacrifices, and the decisions that needed to be made at different stages of a child's life. Thalia's family is at the center of this story. There were several critical decisions made by Thalia's parents, Donnie and Lorena. They were confronted with a traumatic reality that required perspective and patience while fighting through moments of despair and sadness. It was Donnie and Lorena's determination that they would be part of the solution for their daughter that shaped Thalia's journey. It is Donnie's cousin Lisa who noticed Thalia's autistic behavior symptoms and delivered her initial learning therapy sessions. Each child that is diagnosed as being on the autism spectrum will have a different experience with the disorder. No two situations are the same. The following is Thalia's unique autism journey. Her Miracle of Effort. The book is intended to offer hope to the many families that are confronted with this disability. As Thalia says, an autism diagnosis does not mean that a child cannot be successful. It just means that he or she will see the world in a different light. Thalia's simple hope is to inspire autistic individuals to live up to their full potential and provide optimism to families.

Integrating Discovery-Based Research into the Undergraduate Curriculum National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Division on Earth and Life Studies, Committee for Convocation on Integrating Discovery-Based Research into the Undergraduate Curriculum, 2016-01-07

Students who participate in scientific research as undergraduates report gaining many benefits from the experience. However, undergraduate research done independently under a faculty member's guidance or as part of an internship, regardless of its individual benefits, is inherently limited in its overall impact. Faculty members and sponsoring companies have limited time and funding to support undergraduate researchers, and most institutions have available or have allocated only enough human and financial resources to involve a small fraction of their undergraduates in such experiences. Many more students can be involved as undergraduate researchers if they do scientific research either collectively or individually as part of a regularly scheduled course. Course-based research experiences have been shown to provide students

with many of the same benefits acquired from a mentored summer research experience assuming that sufficient class time is invested and several different potential advantages In order to further explore this issue the Division on Earth and Life Studies and the Division of Behavioral and Social Sciences and Education organized a convocation meant to examine the efficacy of engaging large numbers of undergraduate students who are enrolled in traditional academic year courses in the life and related sciences in original research civic engagement around scientific issues and or intensive study of research methods and scientific publications at both two and four year colleges and universities Participants explored the benefits and costs of offering students such experiences and the ways that such efforts may both influence and be influenced by issues such as institutional governance available resources and professional expectations of faculty Integrating Discovery Based Research into the Undergraduate Curriculum summarizes the presentations and discussions from this event **CTET**

Perspectives on the Place of Creativity in Education, Policy and Practice Kevin Gormley,2023-10-04 This book critically analyses how cultural and educational policies construct creativity through a range of concepts and compares this against the open and expansive idea of creativity as experienced by individuals in society more broadly The book draws on empirical data case study examples and ethnographic motifs to identify the discursive construction of creativity and the way in which discourses of creativity are enfolded into narratives of progress in cultural policy Along with auto ethnographical perspectives chapters apply a rich conceptualisation of Foucault and Agamben s work to contemporary questions and issues in education alongside recent policies and lived experiences from teachers Exploring ideas of both fixed and expansive creativity the volume argues that education policy and cultural policy are neoliberalised and that creativity is shaped in schools by regulative schooling systems but ultimately identifies how individuals enact creative practices that subvert and disrupt neoliberal narratives and limited appropriations This book will be of great interest to researchers academics and postgraduate students in the fields of education policy creativity studies and education politics Those interested in arts education or in intersections between education and the writings of Foucault and Agamben more broadly will also find the book of value
