Seafoods: Chemistry, Processing Technology and Quality Fereidoon Shahidi, J.R. Botta, 2012-12-06 Seafoods are important sources of nutrients for humans. Proteins and non protein nitrogenous compounds play an important role in the nutritional value and sensory quality of seafoods. Consumption of fish and marine oils is also actively encouraged for the prevention and treatment of cardiovascular diseases and rheumatoid arthritis. Highly unsaturated long chain omega 3 fatty acids are regarded as the active components of marine oils and seafood lipids. The basic chemical and biochemical properties of seafood proteins and lipids in addition to flavour active components, their microbiological safety and freshness quality are important factors to be considered. A presentation of the state of the art research results on seafoods with respect to their chemistry, processing technology and quality in one volume was made possible by cooperative efforts of an international group of experts. Following a brief overview, the book is divided into three sections. In Part 1, chapters 2 to 8, the chemistry of seafood components such as proteins, lipids, flavorants, together with their properties and nutritional significance is discussed. Part 2, chapters 9 to 13, describes the quality of seafoods with respect to their freshness, preservation, microbiological safety and sensory attributes. The final section of the book, chapters 14 to 16, summarizes further processing of raw material, underutilized species and processing discards for production of value added products.

Quality Attributes of Muscle Foods Youling L. Xiong, Chi-Tang Ho, Fereidoon Shahidi, 2012-12-06

A major challenge for the meat and seafood industries continues to be that of producing high quality wholesome products. Consumers demand for reduced fat, low fat and fat free meats, red meat, poultry and seafood with acceptable flavor, texture and other sensory characteristics or those similar to typical traditional high fat meats has imparted further urgency to rising to this challenge. Consequently, meat scientists strive to develop different antemortem strategies as well as to improve on existing postmortem processing technologies in order to meet this consumer demand. While the microbiological quality of meat, meat products and seafoods is important from a food safety standpoint, it is the physicochemical attributes and the interactions of the various chemical components of muscle and ingredients which directly influence the product palatability and consumer acceptability. Virtually every step in production and processing including animal dietary regime, antemortem stress conditions, postmortem handling, product formulation, temperature of processing, packaging and storage affects the quality attributes of muscle foods.
