#### **Extragalactic Radio Sources From Beams To Jets:**

Extragalactic Radio Sources Jacques Roland, Hélène Sol, Guy Pelletier, 1992-06-26 The physics of active galactic nuclei the origin of extragalactic jets and the formation of extended extragalactic radio sources are among the most interesting challenges of modern astrophysics This book contains the proceedings of the 7th meeting of the Institut d Astrophysique de Paris which drew together both theorists and observers in this exciting field Recent observational data at X ray optical and radio wavelengths is discussed and new theoretical developments concerning beam and jet formation models are considered Special treatment is given to plasma physics problems related to particle acceleration magnetic reconnection beam plasma interaction and coherent emission The volume will be of use to all students and researchers who are working in this field

Extragalactic Radio Sources D.S. Heeschen, C.M. Wade, 2012-12-06 IAU Symposium 97 Extragalactic Radio Sources was held at Albuquerque New Mexico August 3 7 1981 It was co sponsored by IAU Commissions 28 40 47 and 48 and by URSI Commission I Financial and organizational support were provided by the National Radio Astronomy Observatory the University of New Mexico and the National Science Foundation A wide variety of interesting objects and phenomena can be covered under the heading Extragalactic Radio Sources and a diverse set of topics was in fact discussed at the symposium Radio galaxies quasars Seyfert galaxies and BL Lacertids received the most attention but normal galaxies the galactic center and even SS433 were also discussed While the unifying theme of the symposium was radio emission studies at all wavelengths X ray UV optical IR and radio were included In general the emphasis was on individual objects and the physical processes associated with them but there were also papers on statistical studies and cosmology The symposium was attended by 209 scientists from 18 countries Parsec-Scale Radio Jets J. Anton Zensus, Timothy J. Pearson, 1990-08-16 Quasars and active galaxies are the most powerful emitters of radiation in the universe Modern radio telescope arrays have shown that the ultimate energy source resides in the central few parsecs of the galactic nucleus and powers the emitting regions by way of two oppositely directed relativistic jets of energy This volume presents the latest observations and theories of these remarkable objects Topics discussed include superluminal motions the physics of jets and shock fronts in jets related optical observations and cosmic evolution Particular attention is given to the unified theories which attempt to show that many of the phenomena in powerful extragalactic objects are different aspects of a single basic mechanism the main difference in their appearance is a result of their different orientation with respect to the observer Astrophysical Jets and Beams Michael D. Smith, 2012-02-16 An up to date study of astrophysical jets that will appeal to students and researchers in all areas of astrophysics Galactic and Extragalactic Radio Astronomy E. Bouton, Gerrit L. Verschuur, Kenneth I. Kellermann, 2012-12-06 Galactic and Extragalactic Radio Astronomy is a fundamental text for graduate students and professional astronomers and covers all aspects of radio astronomy beyond the solar system Each chapter is written by a renowned expert in the field and contains a review of a particular area of radio astronomy and presents the latest

observations and interpretations as well as an extensive view of the literature as of 1988 Topics covered include galactic continuum emission HII regions the diffuse interstellar medium interstellar molecules astronomical masers neutral hydrogen the galactic center radio stars supernova remnants pulsars extragalactic hydrogen radio galaxies and guasars the microwave background and cosmological radio sources Literature 1992, Part 1 Astronomisches Recheninstitut, 2013-11-11 Astronomy and Astrophysics Abstracts appearing twice a year has become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all Stellar Jets and Bipolar Outflows L. Errico, Alberto A. Vittone, 2012-12-06 In the last few years great improvements in the study of stellar jets and bipolar outflows have been achieved both observationally and theoretically High resolution observations at various frequencies radio IR optical and X ray of these features in different types of objects have shown a large variety of morphologies at all scales often revealing contrasting symmetries which do not allow straightforward kinematic interpretations valid for all cases In particular at present it seems very difficult to give a statistical definition of what the standard properties of jets and bipolar outflows are On the theoretical side the identification of physical processes capable of producing the observed rich morphological variety of jets and bipolar outflows and supporting them over long lifetimes is still controversial Furthermore several models are actively discussed in an attempt of reaching a complete understanding of the phenomenon The workshop provided an unique opportunity for both observers and theoreticians to gather together and produce an updated and exhaustive picture of the field In addition the meeting has been enriched by the presentation of some works on jets in external galaxies This topic was focused on what people working on stellar jets could learn from colleagues working on extragalactic jets and vice versa Invited papers were prepared with the aim of giving the state of the art about scientific subjects contributed papers and some selected poster papers presented on the contrary very recent results in the various fields The Nature of Compact Objects in Active Galactic Nuclei Andrew Robinson, Roberto Juan Terlevich, 1994-03-03 What evidence is there for and against unified schemes for active galactic nuclei AGN How do the AGN populations evolve over cosmological timescales And what can the variability of their UV and X ray emission tell us These are just some of the exciting issues addressed in this volume of papers collected from the 33rd Herstmonceux conference in Cambridge AGN are among the most spectacular objects known to astronomy Yet despite years of intense and wide ranging research the debate continues what is their fundamental source of power Rapid progress has been made towards answering this question by a variety of large scale multi wavelength monitoring campaigns and the latest generation of satellite borne observations. This volume provides a valuable overview and timely update of the exciting and

rapidly developing field of AGN research essential reading for graduate students and researchers **Cosmic Velocity** Fields François R. Bouchet, Marc Lachièze-Rey, 1993 Beams and Jets in Astrophysics Philip A. Hughes, 1991-01-25 This book is the first to provide students and researchers in the field of astrophysical jets with a comprehensive and up to date account of current research An important feature of the book is that it combines discussions of both extragalactic and Galactic jets There are ten chapters authored by fourteen active researchers each of whom is an expert on their chosen topic and the book has been edited to provide a cohesive account of this field of study This is the first volume to integrate studies of jets on all length scales It will be an important textbook for graduate students and a valuable reference source for researchers in many areas of extragalactic and Galactic astronomy It will also be of interest to plasma physicists and space Astronomy and Astrophysics Abstracts S.
