Equation Of State And Phase Transition Issues In Models Of Ordinary Astrophysical Matter:

Equation-of-State and Phase-Transition Issues in Models of Ordinary Astrophysical Matter Vladan Celebonovic, Werner Däppen, Douglas Gough, 2004-11-05 All papers were peer reviewed The aim of the workshop was to bring together physicists and astronomers with an interest in this interdisciplinary field Breakthroughs announced during the workshop include a report that a near ten year controversy about high pressure experiments with hydrogen and deuterium has ended a demonstration that dynamical effects in screening enhancements of nuclear reactions must be taken seriously a critical assessment of systematic errors in observational helioseismological data and a collective realization that right now there is a remarkable number of independent advanced formalisms for astrophysically useful equations of state **The Art of Modeling Stars in the 21st Century (IAU S252)** International Astronomical Union. Symposium, 2008-12-18 Stellar models are the very basic building blocks with which we build up our knowledge of the Universe New numerical experiments are heralding a new level of sophistication in our ability to model and understand how stars work This volume provides an overview and the most recent advances in modeling of stellar structure and evolution Modeling of stars relies on our understanding of the detailed physical processes happening in stars and the most recent observations of stars made by modern large telescopes and current high technologies IAU Symposium 252 presents the most recent developments in five key areas including improvements of the physical ingredients of stellar models the evolution of low and intermediate mass stars the evolution of massive stars close binary evolution and stellar physics in the era of very large telescopes This overview of stellar research is at a level suitable for research astronomers and graduate students **Solar Dynamics and Magnetism from the Interior to the Atmosphere** Nagi N. Mansour, Alexander G. Kosovichev, Rudolf Komm, Dana Longcope, 2013-12-03 Discusses recent advances and new problems in the exploration of the Sun's interior structure solar dynamics and dynamo mechanisms of sunspot and active regions formation sources of solar irradiance variations and links between the subsurface dynamics flaring and CME activity NASA's Solar Dynamics Observatory SDO mission has provided a large amount of new data on solar dynamics and magnetic activities during the rising phase of the current and highly unusual solar cycle These data are complemented by the continuing SOHO mission and by ground based observatories that include the GONG helioseismology network and the New Solar Telescope Also the observations are supported by realistic numerical simulations on supercomputers This unprecedented amount of data provides a unique opportunity for multi instrument investigations that address fundamental problems of the origin of solar magnetic activity at various spatial and temporal scales This book demonstrates that the synergy of high resolution multi wavelength observations and simulations is a key to uncovering the long standing puzzles of solar magnetism and dynamics This volume is aimed at researchers and graduate students active in solar physics and space science Originally published in Solar Physics journal Vol 287 1 2 2013 High Energy Density Laboratory Astrophysics Sergey V.
