**Economics, 10th Edition** Dwivedi D.N., Managerial Economics has stood the test of time for the last 45 years because of the quality of presentation of its text. It has become students' favourite as it provides the latest theories, thoughts, and applications on the subject with timely revisions to stay up to date all the time. Since its first edition, it has provided complete, comprehensive, and authentic text on micro and macro aspects of managerial economics. It has now been revised thoroughly by addressing the real-world complexities of applying these theories to managerial decisions. Key to this edition is the introduction of 17 carefully chosen Case Studies that demonstrate the practical application of abstract economic concepts. These case studies are strategically placed in the text to enhance the learning experience, offering insights into the nuanced decision-making processes in varied business contexts. Significantly, this edition introduces an entirely new Part VII focusing on Theories of Economic Growth and Business Cycles. This part delves into detailed discussions on economic growth and the dynamics of business cycles, reflecting our commitment to depth and applicability.

*Recent Policy Issues in Environmental and Resource Economics* Peter Michaelis, Frank Stähler, 2012-12-06 Peter Michaelis and Frank Stähler. This book deals with recent policy issues in environmental and resource economics. To collect articles on recent policy issues is, of course, always also a question of taste. This volume tries to represent a broad range of papers which covers the double dividend hypothesis, the role of non-profit organizations for environmental policies, trade implications, and international environmental agreements. It consists of two parts: a part on domestic policy issues and a part on international policy issues. A separate part on international policy issues would not have been on the agenda when this volume would have been published two decades ago. But international and global environmental problems are different from purely national problems and deserve a special approach. However, also domestic policies face new challenges. One new focus of domestic policies is the discussion on the relationship between environmental benefits and other policy objectives. Some Remarks on the Double Dividend Hypothesis by Christian Scholz deals with this discussion. In opposition to a number of recent papers, it is found that the possibility for a double dividend depends largely on the substitutability characteristics of taxed commodities.
