Ecology and design Kristina Hill, 2002 *Teaching Landscape* Karsten Jørgensen, Nilgöl Karadeniz, Elke Mertens, Richard Stiles, 2019-08-30 Teaching Landscape The Studio Experience gathers a range of expert contributions from across the world to collect best practice examples of teaching landscape architecture studios This is the companion volume to The Routledge Handbook of Teaching Landscape in the two part set initiated by the European Council of Landscape Architecture Schools ECLAS Design and planning studio as a form of teaching lies at the core of landscape architecture education They can simulate a professional situation and promote the development of creative solutions based on gaining an understanding of a specific project site or planning area address existing challenges in urban and rural landscapes and often involve interaction with real stakeholders such as municipality representatives residents or activist groups In this way studio based planning and design teaching brings students closer to everyday practice helping to prepare them to create real world problem solving designs This book provides fully illustrated examples of studios from over twenty different schools of landscape architecture worldwide With over 250 full colour images it is an essential resource for instructors and academics across the landscape discipline for the continuously evolving process of discussing and generating improved teaching modes in landscape architecture Ecology and the Architectural Imagination Brook Muller, 2014-02-24 By including ecological concerns in the design process from the outset architecture can enhance life Author Brook Muller understands how a designer s predispositions and poetic judgement in dealing with complex and dynamic ecological systems impact the greenness of built outcomes Ecology and the Architectural Imagination offers a series of speculations on architectural possibility when ecology is embedded from conceptual phases onward how notions of function and structure of ecosystems can inspire ideas of architectural space making and order and how the architect s role and contribution can shift through this engagement As an ecological architect working in increasingly dense urban environments you can create diverse spaces of inhabitation and connect project scale living systems with those at the neighborhood and region scales Equipped with ecological literacy critical thinking and collaboration skills you are empowered to play important roles in the remaking of our cities **Design and Nature III** C. A. Brebbia, 2006 Throughout history many leading thinkers have been inspired by the parallels between nature and human design in mathematics engineering and other areas This book publishes the results of a conference on the significance of nature for design *Basics Landscape Architecture 02: Ecological Design* Nancy Rottle, Ken Yocom, 2017-08-10 Basics Landscape Architecture 02 Ecological Design provides an overview of ecological design and planning for landscape architects It explores the concepts and themes important to the contemporary practice of ecological design and planning in a highly accessible and richly illustrated format Focusing primarily on urban environments this book examines the relationships between ecological design theory and design methods It describes and illustrates the basic structures and functions of natural and human systems through landscape ecology principles and the dynamics of landscape

processes Design Education for a Sustainable Future Rob Fleming, 2013-04-26 Sustainability is a powerful force that is fundamentally reshaping humanity's relationship to the natural world and is ushering in the Age of Integration. The move from well-intentioned environmental friendliness to the higher bar of integral sustainability and regenerative design demands a new type of design professional: one that is deeply collaborative, ethically grounded, empathically connected, and technologically empowered. As a response, this book argues for a great leap forward in design education from an individualistic and competitive model casually focused on greening to a new approach defined by an integral consciousness shaped by the values of inclusivity and cooperation and implemented by a series of integrative behaviors including an ethically infused design brief, a co-creative design process, on-going value engineering, pre-emptive engineering, design validation through simulation, on-line enabled integrated learning, the use of well-vetted rating systems. This book contains the integral frameworks, whole system change methodologies, and intrinsic values that will assist professors and their students in an authentic and effective pursuit of design education for a sustainable future. **Landscape Performance** Bo

Yang, 2018-10-26 Ian McHarg's ecological planning approach has been influential since the 20th century. However, few empirical studies have been conducted to evaluate the performance of his projects. Using the framework of landscape performance assessment, this book demonstrates the long-term benefits of a renowned McHargian project: The Woodlands town development through quantitative and qualitative methods. Including 44 black and white illustrations, *Landscape Performance* systematically documents the performance benefits of the environmental, social, and economic aspects of The Woodlands project. It delves into McHarg's planning success in The Woodlands in comparison with adjacent Houston developments which demonstrated urban resilience after Hurricane Harvey in 2017. Lastly, it identifies the ingredients of McHarg's ability to do real and permanent good. Yang also includes a number of appendices which provide valuable information on the methods of assessing performance in landscape development. This book would be beneficial to academics and students of landscape architecture and planning with a particular interest in Ian McHarg. **Site Matters** Andrea

Kahn, Carol J. Burns, 2020-12-21 In the era of the Anthropocene, site matters are more pressing than ever. Building on the concepts, theories, and multi-disciplinary approaches raised in the first edition, this publication strives to address the changes that have taken place over the last 15 years with new material to complement and re-position the initial volume. Reaching across design disciplines, this highly illustrated anthology assembles essays from architects, landscape architects, urban designers, planners, historians, and artists to explore ways to physically and conceptually engage site. Thoughtful discourse and empirically grounded pieces combine to provide the language and theory to contextualize the meanings of site in the built environment. The increasingly complex hybridity of constructed environments today demands new tools for thinking about and working with site. Drawing contributions from outside and within the traditional design disciplines, this edition will trace important developments in site thinking with new essays on topics such as climate change, landscape as infrastructure, shifts

from global to planetary urbanization debates and the proliferation of participatory site transformation practices Edited by two leading practitioners and academics *Site Matters* juxtaposes timeless contributions from individuals including Elizabeth Meyer Robert Beauregard and Robin Dripps with original new writings from Peter Marcuse Jane Wolff Neil Brenner and Thaisa Way amongst others to recontextualize and reignite the debate around site An ideal text for students academics and researchers interested in site and design theory *Cities of the Future* Vladimir Novotny, Paul Brown, 2007-09-04 This book is developed from and includes the presentations of leading international experts and scholars in the 12 14 July 2006 Wingspread Workshop With urban waters as a focal point this book will explore the links between urban water quality and hydrology and the broader concepts of green cities and smart growth It also addresses legal and social barriers to urban ecological sustainability and proposes practical ways to overcome those barriers *Cities of the Future* features chapters containing visionary concepts on how to ensure that cities and their water resources become ecologically sustainable and are able to provide clean water for all beneficial uses The book links North American and Worldwide experience and approaches The book is primarily a professional reference aimed at a wide interdisciplinary audience including universities consultants environmental advocacy groups and legal environmental professionals **Urban Landscape Ecology** Robert A. Francis, James D.A. Millington, Michael A. Chadwick, 2016-04-14 The growth of cities poses ever increasing challenges for the natural environment on which they impact and depend not only within their boundaries but also in surrounding peri urban areas Landscape ecology the study of interactions across space and time between the structure and function of physical biological and cultural components of landscapes has a pivotal role to play in identifying sustainable solutions This book brings together examples of research at the cutting edge of urban landscape ecology across multiple contexts that investigate the state maintenance and restoration of healthy and functional natural environments across urban and peri urban landscapes An explicit focus is on urban landscapes in contrast to other books which have considered urban ecosystems and ecology without specific focus on spatial connections It integrates research and perspectives from across academia public and private practitioners of urban conservation planning and design It provides a much needed summary of current thinking on how urban landscapes can provide the foundation of sustained economic growth prospering communities and personal well being Nature by Design Eric Higgs, 2003-04-25 Ecological restoration is the process of repairing human damage to ecosystems It involves reintroducing missing plants and animals rebuilding soils eliminating hazardous substances ripping up roads and returning natural processes such as fire and flooding to places that thrive on their regular occurrence Thousands of restoration projects take place in North America every year In *Nature by Design* Eric Higgs argues that profound philosophical and cultural shifts accompany these projects He explores the ethical and philosophical bases of restoration and the question of what constitutes good ecological restoration Higgs explains how and why the restoration movement came about where it fits into the array of approaches to human relationships with the land and how it might be

used to secure a sustainable future Some environmental philosophers and activists worry that restoration will dilute preservation and conservation efforts and lead to an even deeper technological attitude toward nature They ask whether even well conceived restoration projects are in fact just expressions of human will Higgs prefaces his responses to such concerns by distinguishing among several types of ecological restoration He also describes a growing gulf between professionals and amateurs Higgs finds much merit in criticism about technological restoration projects which can cause more damage than they undo These projects often ignore the fact that changing one thing in a complex system can change the whole system For restoration projects to be successful Higgs argues people at the community level must be engaged These focal restorations bring communities together helping volunteers develop a dedication to place and encouraging democracy

Blue Architecture Brook Muller, 2022-05-10 2023 Finalist PROSE Award in Architecture and Urban Planning A guide to water focused and climate resilient architectural and urban design Le Corbusier famously said A house is a machine for living in We now confront the litany of environmental challenges associated with the legacy of the architectural machine a changing climate massive species die off diminished air and water quality and resource scarcities Brook Muller offers an alternative water centric urban design that fosters sustainability equity and architectural creativity Inspired by the vernacular such as the levadas of Madeira Island and both the arid and drenched places of the American West Muller articulates a hydro logical philosophy in which architects and planners begin by conceptualizing interactions between existing waterways and the spaces they intend to develop From these interactions and the new technologies and approaches enabling them aesthetic spatial and experiential opportunities follow Not content merely to work around sensitive ecology Muller argues for genuinely climate adapted urban landscapes in which buildings act as ecological infrastructure that actually improve watersheds while delivering functionality and beauty for diverse communities Rich in images and practical examples Blue Architecture will change the way we think about our designed world

The Risk City Yosef Jabareen, 2015-04-23 Contemporary cities face phenomenal risks and they face particularly high levels of mounting social and environmental risks including social polarization urban conflicts riots terror and climate change threats This book suggests that climate change and its resulting uncertainties challenge the concepts procedures and scope of conventional approaches to planning creating a need to rethink and revise current planning methods Therefore this book suggests a paradigm shift in our thinking interrogation and planning of our cities Based on the contemporary conditions of risk at cities this book conceptualizes the risk city as a construct of three interlinked concepts of risk trust and practice It is a construct of risk and its new evolving conditions and knowledge of uncertainties stem from climate change and other risks and uncertainties As a construct of practices the risk city produces social and political institutional framework and promotes practices accordingly in order to reduce risk and risk possibilities and to increase trust In light of the complex challenges and risks to the human habitat that have emerged in recent years many cities have prepared various types of plans aimed at addressing the challenges posed by climate change Nonetheless despite the importance of these plans and the major public resources invested in their formulation we still know little about them and have yet to begin studying them and assessing their contributions From the innovative perspective of the risk city this book asks critical questions about the nature vision practices and potential impact of the recent climate change oriented plans What kinds of risks do they attempt to address what types of practices do they institute and what types of approaches

do they apply Do they adequately address the risks and uncertainties posed How do they contribute to the worldwide effort to reduce greenhouse gas emissions This book uses the methodologically innovative Risk City framework to examine the nature vision outcomes practices and impact of these crucial plans as well as their contribution to the resilience of our cities and to global efforts toward reducing greenhouse gas emissions
