**MARSCHAK X X X X LOSSE NUMMERS**, Jacob Marschak, 1974-12-01 *Prediction and Causality in Econometrics and Related Topics* Nguyen Ngoc Thach, Doan Thanh Ha, Nguyen Duc Trung, Vladik Kreinovich, 2022-07-28 This book provides the ultimate goal of economic studies to predict how the economy develops and what will happen if we implement different policies To be able to do that we need to have a good understanding of what causes what in economics Prediction and causality in economics are the main topics of this book s chapters they use both more traditional and more innovative techniques including quantum ideas to make predictions about the world economy international trade exchange rates about a country s economy gross domestic product stock index inflation rate and about individual enterprises banks and micro finance institutions their future performance including the risk of bankruptcy their stock prices and their liquidity Several papers study how COVID 19 has influenced the world economy This book helps practitioners and researchers to learn more about prediction and causality in economics and to further develop this important research direction

Philosophico-Methodological Analysis of Prediction and Its Role in Economics Wenceslao J. Gonzalez, 2015 This book develops a philosophico methodological analysis of prediction and its role in economics Prediction plays a key role in economics in various ways It can be seen as a basic science as an applied science and in the application of this science First it is used by economic theory in order to test the available knowledge In this regard prediction has been presented as the scientific test for economics as a science Second prediction provides a content regarding the possible future that can be used for prescription in applied economics Thus it can be used as a guide for economic policy i e as knowledge concerning the future to be employed for the resolution of specific problems Third prediction also has a role in the application of this science in the public arena This is through the decision making of the agents individuals or organizations in quite different settings both in the realm of microeconomics and macroeconomics Within this context the research is organized in five parts which discuss relevant aspects of the role of prediction in economics I The problem of prediction as a test for a science II The general orientation in methodology of science and the problem of prediction as a scientific test III The methodological framework of social sciences and economics Incidence for prediction as a test IV Epistemology and methodology of economic prediction Rationality and empirical approaches and V Methodological aspects of economic prediction From description to prescription Thus the book is of interest for philosophers and economists as well as policy makers seeking to ascertain the roots of their performance The style used lends itself to a wide audience *Information, Measurement, and Prediction in*

*Economics* Victor Zarnowitz, 1979 This paper examines the flow of production and use of economic information and analyzes the effects of measurement errors particularly as transmitted through expectations and forecasts Economic data are subject to a variety of errors and the uncertainty about economic measures tends to increase further with the amount and complexity of the processing performed on the underlying data as well as with the distance between the user and the processor With some exceptions economic time series lag significantly behind their reference periods and many undergo large revisions The effective information lag includes not only the time required for incremental data to be produced and transmitted but also the time required for the signals to be extracted by the user This lag is substantial for many important series In general there is no presumption that the measurement errors are random Systematic errors are frequent and their sources and forms vary so much that they may be difficult to detect In times of strong shocks and surprising developments such as occurred earlier in this decade measurement of short term changes in the economy is particularly difficult and current signals are apt to be often misinterpreted This can result in broadly diffused decision errors which in time are discovered leading to sharp corrective reactions Aggregative predictions from well known and influential sources show certain common patterns of error which suggests that forecasters react similarly to the observed events and unanticipated shocks Forecasts of GNP and related variables are adversely affected by errors in both the preliminary data and the base level estimates There is some support here for the hypothesis that information lags play a significant role in generating business cycles but it is important to note that the errors involved in predicting the future are typically much larger than the errors involved in estimating the present or recent past
